Comparison of Mathematics and Physics Education II Frederik Dilling, Simon F. Kraus, 2022-07-01 Interdisciplinary teaching is considered as one of the main goals of education worldwide At the same time it poses an immense challenge to teachers who have been trained in only one of the combines subjects This is true even for closely related disciplines such as mathematics and physics In this volume practice oriented educational comparisons are made across various topics that are highly relevant in both subjects Furthermore practical examples are presented in the form of lesson plans in which exemplary implementation in class is presented considering both educational perspectives **Rigorous Mathematical Thinking** James T. Kinard, Alex Kozulin, 2008-06-02 This book demonstrates how rigorous mathematical thinking can be fostered through the development of students cognitive tools and operations This approach seems to be particularly effective with socially disadvantaged and culturally different students The authors argue that children s cognitive functions cannot be viewed as following a natural maturational path they should be actively constructed during the educational process The Rigorous Mathematical Thinking RMT model is based on two major theoretical approaches Vygotsky s theory of psychological tools and Feuerstein s concept of mediated learning experience The book starts with general cognitive tools that are essential for all types of problem solving and then moves to mathematically specific cognitive tools and methods for utilizing these tools for mathematical conceptual formation The application of the RMT model in various urban classrooms demonstrates how mathematics education standards can be reached even by the students with a history of educational failure who were considered hopeless underachievers **Integrating Technology in the Classroom** ,1999 **ENC Focus** ,2001

Resources in Education ,1998 **School Work** ,1907 **Planning and Analyzing Teaching** Angelika Kullberg, Åke Ingerman, Ference Marton, 2024-01-24 Using illustrative teaching case studies this book demonstrates how teaching informed

by a learning theory specifically Variation theory can equip teachers to facilitate possibilities for students learning in effective and powerful ways For a long period of time teaching has been black boxed in favour of other explanations of why students learn or not such as motivation and social interaction A large amount of research on teaching and learning not the least made using Variation theory has shown that students often need to experience the same aspects of the focused content or capability in order to learn indicating that relationships between teaching and learning are not unique or even qualitatively different for every individual and every situation This perspective on the relationship between teaching and learning emphasizes content specific aspects and in that sense structural components of teaching while other aspects of schooling such as social interaction and general well being recede into the background The authors argue for the importance of this in the direct development of teachers independent collective professional knowledge about teaching and the leverage this gives for developing student learning They introduce theoretical tools to help teachers to increase the probability that teaching focusing a specific content or capability is predictive of students learning of that specific content or capability while decreasing contextual dependency without assuming that teaching and learning have a one to one relationship Intended for teachers graduate students in education teacher educators student teachers and researchers this book shows that while there is no simple equation between teaching and learning there are general though content specific aspects of teaching that can be systematically planned and analyzed and used to improve the quality of student learning The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license
