1. Para realizar proceso de trazar la restitución nos balemos de la marca flotante que mide el paralaje entre el punto homólogo en el que se encuentra sobre las imágenes orientadas para que el software pueda calcular la altura como lo arias con la barra de paralaje pero a tiempo real. Seleccionas le layer que deseas usar y con ayuda del sistema de visión estereoscópico que cuentas en este caso anáglifos desplazas con el mouse la marca flotante (x,y) y sin perder la estereoscopia ajustas la altura del con el scroll del punto que quieras capturar y das clip para marcarlo como punto, vértice de línea o polígono según el layer que estés usando usas doble clip para finalizar una line o polígono.

2. Para poder editar los trazos los seleccionamos con la herramientas   siendo la primeras para seleccionar uno al ves y el segundo mediante un rectángulo, debemos recordar que para selecciona individualmente no basta con estar en las mismas coordenadas x,y también tenemos que estar en la misma altura z tras seleccionar lo que deseamos editar contamos con diversas herramientas de edición que se muestran en la siguiente imagen.

**Remote Sensing in Archaeology** James R. Wiseman, Farouk El-Baz, 2007-06-04 Over the last few decades a revolution took place in our ability to observe and explore our home planet using spaceborne and airborne remote sensing instruments This revolution resulted from the new capability of observing on a large regional and global scale surface patterns and features and from using multispectral instruments to observe surface signatures not visible to the human eye and to penetrate below the surface cover using microwave radiation Over the last decade this new technology is being brought to bear in the field of archaeology As nicely and comprehensively described in this book remote sensing techniques are bringing new powerful tools to help archaeologists in their quest of discovery and exploration Even though this field is still in its infancy the different articles in this book give us a glimpse of the things to come and the great potential of remote sensing in archaeology The editors have brought an excellent sampling of authors that illustrate how remote sensing techniques are being used in the real world of archaeological exploration A number of chapters illustrate how spaceborne and airborne remote sensing instruments are being used to decipher surface morphological features in arid Egypt Arabia semi arid Greece Ethiopia Italy as well as tropical regions Costa Rica Guatemala Cambodia to help in archaeological and paleontological exploration They illustrate the use of surface cover penetration with

A. Abbasi,2012-03-10 This book covers water quality indices WQI in depth it describes what purpose they serve how they are generated what are their strengths and weaknesses and how to make the best use of them It is a concise and unique guide to WQIs for chemists chemical environmental engineers and government officials Whereas it is easy to express the quantity of water it is very difficult to express its quality because a large number of variables determine the water quality WQIs seek to resolve the difficulty by translating a set of a large number of variables to a one digit or a two digit numeral They are essential in communicating the status of different water

resources in terms of water quality and the impact of various factors on it to policy makers service personnel and the lay public Further they are exceedingly useful in the monitoring and management of water quality With the importance of water and water quality increasing exponentially the importance of this topic is also set to increase enormously because only with the use of indices is it possible to assess express communicate and monitor the overall quality of any water source Provides a concise guide to WQIs their purpose and generation Compares existing methods and WQIs and outlines strengths and weaknesses Makes recommendations on how the indices should be used and under what circumstances they apply
