

- (a) If $h(t)$ is bandlimited show that $w(t) = Lv(t)$ is bandlimited regardless of whether $v(t)$ is bandlimited.
- (b) Suppose $v(t)$, $h(t)$, and $w(t) = Lv(t)$ are all bandlimited with spectrum contained in $-1/2 < s < 1/2$. According to the sampling theorem we can write

$$v(t) = \sum_{k=-\infty}^{\infty} v(k) \text{sinc}(t-k) \quad h(t) = \sum_{k=-\infty}^{\infty} h(k) \text{sinc}(t-k) \quad w(t) = \sum_{k=-\infty}^{\infty} w(k) \text{sinc}(t-k)$$

Express the sample values $w(k)$ in terms of the sample values of $v(t)$ and $h(t)$. (You will need to consider the convolution of shifted sines.)

5. (20 points) Let $a > 0$ and define the (continuous) running average of a signal $f(t)$ to be

$$Lf(t) = \frac{1}{2a} \int_{t-a}^{t+a} f(x) dx$$

- (a) Show that L is an LTI system and find its impulse response and transfer function.
- (b) What happens to the system as $a \rightarrow 0$? Justify your answer based on properties of the impulse response.
- (c) Find the impulse response and the transfer function for the cascaded system $M = L(Lf)$. Simplify your answer as much as possible, i.e., don't simply express the impulse response as a convolution.
- (d) Three signals are plotted (approximately) below. One is an input signal $f(t)$. One is $Lf(t)$ and one is $Mf(t)$. Which is which, and why?

6. (15 points) *Upsampling and Downsampling discrete signals:* We are given a discrete-time signal x_n , which was obtained by sampling a continuous-time $x(t)$ at frequency much higher than the Nyquist rate. Let $x_n = x(nT_s)$. Sometimes for an application, we need the samples of the signal $x(t)$ at a different sampling rate, say αT_s , where $\alpha > 0$. If $\alpha > 1$, it is downsampling else it is upsampling. One way to obtain the sample points at a different sampling frequency, is to reconstruct the signal $x(t)$ (which can be done as the original samples were obtained by sampling above the Nyquist rate) from the samples x_n and then resample it at the new frequency. However, due to non-idealities of the D/A and the A/D converters, this approach is not desirable. In this question, we want to obtain the new sample points directly by using x_n .

Elasticity J. R. Barber, 2009-11-21 The subject of Elasticity can be approached from several points of view pending on whether the practitioner is principally interested in the mathematical structure of the subject or in its use in engineering applications and in the latter case whether essentially numerical or analytical methods are envisaged as the solution method My first introduction to the subject was in response to a need for information about a specific problem in Tribology As a practising Engineer with a background only in elementary Mechanics of materials I approached that problem initially using the concepts of concentrated forces and superposition Today with a rather more extensive knowledge of analytical techniques in Elasticity I still find it helpful to go back to these roots in the elementary theory and think through a problem physically as well as mathematically whenever some new and unexpected feature presents difficulties in research This way of thinking will be found to permeate this book My engineering background will also reveal itself in a tendency to work examples through to final expressions for stresses and displacements rather than leave the derivation at a point where the remaining manipulations would be mathematically routine The first edition of this book published in 1992 was based on a one semester graduate course on Linear Elasticity that I have taught at the University of Michigan since 1983

Monitoring the Nervous System for Anesthesiologists and Other Health Care Professionals Antoun Koht, Tod B. Sloan, J. Richard Toleikis, 2017-06-12. This widely praised first of its kind book has been thoroughly updated, expanded and enriched with extensive new case material, illustrations and link outs to multimedia practice guidelines and more. Written and edited by outstanding world experts, this was the first and remains the leading single source volume on intraoperative neurophysiological monitoring (IOM). It is aimed at graduate students and trainees as well as members of the operative team including anesthesiologists, technologists, neurophysiologists, surgeons and nurses. Now commonplace in procedures that place the nervous system at risk, such as orthopedics, neurosurgery, otologic surgery, vascular surgery and others, effective IOM requires an unusually high degree of coordination among members of the operative team. The purpose of the book is to help students, trainees and team members acquire a better understanding of one another's roles and thereby to improve the quality of care and patient safety. From the reviews of the First Edition: A welcome addition to reference works devoted to the expanding field of nervous system monitoring in the intraoperative period will serve as a useful guide for many different health care professionals and particularly for anesthesiologists involved with this monitoring modality. An excellent reference and a helpful guide both to the novice and to the developing expert in this field. *Canadian Journal of Anesthesia*. Impressive. The book is well written, indexed and illustrated. The chapters are all extensively referenced. It is also very good value at the price. I would recommend this book to all residents and especially to all neuroanesthesiologists. It will make a worthwhile addition to their library. *Journal of Neurosurgical Anesthesiology*.
