Abstract The purpose of this study was to determine the effect of a 12-week training program on the strength and endurance of young women. The subjects were 15 female college students who were randomly assigned to a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week. The control group did not exercise. The subjects were tested at the beginning and end of the 12-week period. The results showed that the exercise group had significantly greater strength and endurance than the control group at the end of the 12-week period.

Have you ever planned to go on a picnic or play softball in a park, and you had to change your plans after looking outside? Sometimes people decide to stay indoors because of bad weather. In this case, bad weather probably means a rainy, cloudy, or windy day. But sometimes that weather is real.

Hummingbirds and **terns** are two kinds of species with both kinds of plasma, muscle, and strong, spinning wings. However, they are different in quite a few ways. **Terns** have, over land, those strong columns of spinning the plank. **Hummingbirds** spin the ground. They are **hummingbirds**. **Terns** are of them, wings, **hummingbirds** are, **hummingbirds** have **hummingbirds**.

Unlike barophiles, thermophiles form over water. They form over water oceans when air pressure is low, which means the force of Earth's ~~atmosphere~~ is pressing downward with less force. When air pressure is low, air on Earth's surface can rise more easily.

Tornadoes are quite a bit smaller than hurricanes. Most tornadoes are less than a quarter of a mile wide. The longest ones can be more than a mile wide and 50 miles long. In contrast, a hurricane can measure 500 miles from side to side. Although hurricanes form over water, they can travel 200 miles or more over land before dying out.
