

A close-up, intimate photograph of a man and a woman. The man, with a shaved head and a light beard, is looking down at the woman. The woman, with dark hair, is wearing a white tank top and has her arms wrapped around the man's neck and shoulders. The man has a large, intricate tattoo on his left shoulder. The overall tone is warm and romantic.

Sahimi, 2011-05-09 In this standard reference of the field theoretical and experimental approaches to flow hydrodynamic dispersion and miscible displacements in porous media and fractured rock are considered Two different approaches are discussed and contrasted with each other The first approach is based on the classical equations of flow and transport called continuum models The second approach is based on modern methods of statistical physics of disordered media that is on discrete models which have become increasingly popular over the past 15 years The book is unique in its scope since 1 there is currently no book that compares the two approaches and covers all important aspects of porous media problems and 2 includes discussion of fractured rocks which so far has been treated as a separate subject Portions of the book would be suitable for an advanced undergraduate course The book will be ideal for graduate courses on the subject and can be used by chemical petroleum civil environmental engineers and geologists as well as physicists applied physicist and allied scientists that deal with various porous media problems **Advances in Research on the Strength and Fracture of Materials**
