

The background of the slide features a collection of test tubes in a rack. Some tubes contain bright yellow liquids, while others contain red liquids. The lighting is dramatic, with a strong light source from the top left creating a gradient across the scene and casting reflections on the surfaces of the glass tubes.

Gcse Physical Science Grade11:

Mobile Learning and STEM Helen Crompton, John Traxler, 2015-12-07 In recent years there has been a renewed focus on STEM education in the United States fueled by evidence that young learners competencies in science technology engineering and mathematics are falling behind those of their global peers Scholars and practitioners are beginning to utilize the new pedagogical opportunities offered by mobile learning to improve the successes of teachers and K 12 students across STEM subjects Mobile Learning and STEM Case Studies in Practice is a comprehensive collection of case studies that explore mobile learning s support of STEM subjects and that utilize mobile technology to facilitate unique and effective K 12 teaching and learning experiences In addition to its focus on STEM achievement for researchers this volume is a resource for teachers working to implement mobile learning initiatives into their classrooms Mobile Learning and STEM also includes research that is applicable to classrooms in nations around the world where few students from underrepresented racial and socioeconomic backgrounds are entering into STEM jobs Concluding with a summary of its research and its implications to future scholarship and practice this book is a springboard for practitioners specialists higher education instructors and researchers who want to establish better practices in schools and raise student achievement in STEM subjects **England and Wales Youth Cohort Study** Yuan Cheng, Joan Payne, Sharon Witherspoon, 1995 *FCS English First Additional Language L3* Elisabeth Pilbeam, 2008 *Science Teaching in Schools* Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee s report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools **Teaching and Learning** Charles Desforges, Richard Fox, 2008-04-15 This is the first collection of key articles on the psychology behind educational attainment It brings together in one volume for students a set of accessible but influential papers representing the best classic and cutting edge work in the field **Understanding Young People's Science Aspirations** Louise Archer, Jennifer DeWitt, 2016-08-12 Understanding Young People s Science

Aspirations offers new evidence and understanding about how young people develop their aspirations for education learning and ultimately careers in science Integrating new findings from a major research study with a wide ranging review of existing international literature it brings a distinctive sociological analytic lens to the field of science education The book offers an explanation of how some young people do become dedicated to follow science and what might be done to increase and broaden this population exploring the need for increased scientific literacy among citizens to enable them to exercise agency and lead a life underpinned by informed decisions about their own health and their environment Key issues considered include why we should study young people s science aspirations the role of families social class and science capital in career choice the links between ethnicity gender and science aspirations the implications for research policy and practice Set in the context of widespread international policy concern about the urgent need to improve increase and diversify participation in post 16 science this key text considers how we must encourage a supply of appropriately qualified future scientists and workers in STEM industries and ensure a high level of scientific literacy in society It is a crucial read for all training and practicing science teachers education researchers and academics as well as anyone invested in the desire to help fulfil young people s science aspirations Physics Education and Gender Allison J. Gonsalves,Anna T.

Danielsson,2020-04-24 This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners teachers and practitioners of physics The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations e g race class LGBT status ability etc This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics and that seeks to challenge dominant understandings of who does physics and what counts as physics competence Studying gender in physics education research from a perspective of identity and identity construction allows us to understand participation in physics cultures in new ways We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices discourses that dominate physics cultures and actions that maintain or challenge structures of dominance and subordination in physics education The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender *Really Raising Standards* Philip Adey,Dr Michael Shayer,MICHAEL Shayer,2006-10-19 Written by experienced teachers and educational researchers Phillip Adey and Michael Shayer Really Raising Standards analyses attempts to teach children to think more effectively and efficiently Their practical advice on how to improve children s performance by the application of the findings of the CASE research project will radically alter the approach of many professional teachers and student teachers as to the education of

children in schools An important contribution to the application of psychological theory in education **The Age of STEM**
Brigid Freeman, Simon Marginson, Russell Tytler, 2014-10-24 Across the world STEM learning and work in Science
Technology Engineering and Mathematics has taken central importance in education and the economy in a way that few
other disciplines have STEM competence has become seen as key to higher productivity technological adaptation and
research based innovation No area of educational provision has a greater current importance than the STEM disciplines yet
there is a surprising dearth of comprehensive and world wide information about STEM policy participation programs and
practice The Age of STEM is a state of the art survey of the global trends and major country initiatives in STEM It gives an
international overview of issues such as STEM strategy and coordination curricula teaching and assessment women in STEM
indigenous students research training STEM in the graduate labour markets STEM breadth and STEM depth The individual
chapters give comparative international analysis as well as a global overview particularly focusing on the growing number of
policies and practices in mobilising and developing talent in the STEM fields The book will be of particular interest to anyone
involved in educational policy those in education management and leaders in both schooling and tertiary education It will
have a wider resonance among practitioners in the STEM disciplines particularly at university level and for those interested
in contemporary public policy **Effective Teachers in Secondary Schools (2nd Edition)** Tony Swainston, 2008-11-18
This updated DVD and book pack is an ideal resource for training both in schools and colleges
