

ADEMCO 5800RP RF Repeater Module – Installation Instructions

INTRODUCTION

The 5800RP RF Repeater Module consists of an RF receiver and a transmitter and is intended to extend the range of ADEMCO series RF devices by 200 feet (approximately).

The 5800RP receives alarms, status, and control messages from 5800 series devices, and forwards these messages to connected panel connected receivers such as the 5811EM, 5880, 6120RP, 6130RP, and LV900 controls. The control then responds accordingly (acknowledges the system, initiates an alarm, etc.).

The 5800RP also transmits its own status including tamper, AC loss and RF jam detect via a built-in serial number assigned to a control panel control. Status is sent whenever a change occurs or as part of a supervisory check-in message sent approximately once an hour.

The 5800RP contains a rechargeable battery that provides up to 48 hours of standby operation after primary power is lost.

The 5800RP features a Spatial Diversity system that virtually eliminates the possibility of "Nulls" and "Dead Spots" within the coverage area.

Figure 1.

Wireless System Overview using 5800RP Repeater Module

INSTALLING THE 5800RP MODULE

Mount the 5800RP vertically in its own housing following the steps below, and avoid mounting the module with the antenna touching a metal surface.

Check for RF Interference: Before mounting permanently, use the red RF Interference LED to check for strong local radio frequency interference at the intended mounting location. If this LED is continuously lit, the 5800RP module should be relocated.

Removing the Cover: Remove the 5800RP's cover by inserting and twisting a screwdriver blade in the slot at the center of the cover's lower edge. Note that removing the cover also places the 5800RP in the Go/No Go Test mode. This decreases its range during installation to insure an adequate margin during normal operation.

Mounting the Module

1. For concealed wiring, route power wires through the rectangular opening at the rear of the base before mounting. For surface wiring entry, a thin breakaway area is provided along the base's right edge.
2. Mount the module in the selected location. For greatest security, use all four mounting holes (two keyhole holes and two round holes) in the plastic base.
3. Install each antenna in the respective right-hand terminal of the two terminal blocks at the upper edge of the 5800RP's circuit board, and tighten the screws to secure them.
4. Affix the Summary of Connections label to the inside of the module's cover. Make sure the arrows and large "plus sign" on the label line up with the corresponding posts in the cover.
5. If applicable, set the Site ID by referring to the Setting the Site ID section on the next page.

Connecting the Power Source

The 5800RP is powered from an AC external power source connected to terminals 1 and 2 (see Figure 2).

Power source ratings are as follows:

Type	Rating
Class 2 AC Transformer	5W/2C, 12VAC (Honeywell P/N 365-07705)

6. Connect the transformer to the 5800RP's terminals. Refer to Figure 2. These terminals are not polarized. The leads from the AC transformer may be connected to either terminal. Do not connect to a receptacle controlled by a switch.

NOTE: Use of power sources with higher or lower voltages may result in damage or failure to operate properly.

Connecting the Battery

7. Begin battery installation by attaching an adhesive backed hook and loop fastener strip (supplied to the Summary of Connections label in the cover). Place the strip within the large box drawing labeled "PLACE BATTERY HERE". Refer to Figure 2.
 8. Attach another adhesive backed hook and loop fastener strip to the battery. Attach the battery to the cover by firmly pressing the two hook and loop fastener strips together. Make sure the battery is positioned as shown in Figure 2.
 9. Plug the battery cable into the battery connector on the 5800RP PCB. Refer to Figure 2.
- CHARGING NOTE:** The battery must be allowed to charge at least 48 hours in order to reach its full capacity.
10. Replace the cover on the 5800RP, being careful not to pinch the battery wires between the cover and case or any PCB components.
