used to manage a JOSHUA data base and execute JOSHUA modules on VAX VMS and IBM MVS computer systems This
manual provides instructions for using the JS routines and information about the internal data structures and logic used by
the routines It is intended for use primarily by JOSHUA systems programmers however advanced applications programmers
may also find it useful The JS routines are as far as possible written in ANSI FORTRAN 77 so that they are easily
maintainable and easily portable to different computer systems Nevertheless the JOSHUA system provides features that are
not available in ANSI FORTRAN 77 notably dynamic module execution and a data base of named variable length unformatted
records so some parts of the routines are coded in nonstandard FORTRAN or assembler as a last resort In most cases the
nonstandard sections of code are different for each computer system To make it easy for programmers using the JS routines
to avoid naming conflicts the JS routines and common block all have six character names that begin with the characters
