Jxta Java P2p Programming Darren Govoni:

JXTA Daniel Brookshier, 2002 JXTA Java P2P Programming provides an invaluable introduction to this new technology filled with useful information and practical examples. It was created by members of the JXTA community sharing their real world experience to introduce developers to JXTA. It starts with the fundamentals of P2P and demonstrates how JXTA fulfills the P2P promise then covers the essentials of JXTA including the protocols the JXTA Shell and groups. Later chapters include case studies demonstrating JXTA to synchronize data and to create distributed applications. Includes a foreword by Juan Carlos Soto Group Marketing Manager for Project JXTA at Sun Microsystems and the jxta.org Open Source Community Manager. *Java P2P Unleashed* Robert Flenner, 2003 Java P2P Unleashed provides a single source for Java developers who want to develop P2P systems. The book explains the benefits of each technology and shows how to fit the P2P pieces together both in building new systems and integrating with existing ones. It starts with a discussion of the P2P architecture referencing similarities with existing familiar systems while previewing several types of P2P applications. It explains how to plan ahead for security, routing, performance and other issues when developing a P2P application. Each technology included in the book JXTA, Jini, JavaSpaces, J2EE Web services is approached from a P2P perspective focusing on implementation concerns Java developers will face while using them. The last section includes several large scale examples of different P2P applications managing content, building communities, integrating services, routing messages and using intelligent agents to gather information. The final chapter looks ahead to future developments in Java P2P technologies. Distributed Hash Table Hao Zhang, Yonggang Wen, Haiyong Xie, Nenghai Yu, 2013-10-08 This SpringerBrief summarizes the development of Distributed Hash Table in both academic and industrial fields. It covers the main theory, platforms and applications of this key part in distributed systems and applications especially in large scale distributed environments. The authors teach the principles of several popular DHT platforms that can solve practical problems such as load balance, multiple replicas, consistency and latency. They also propose DHT based applications including multicast, anycast, distributed file systems, search, storage, content delivery, network file sharing and communication. These platforms and applications are used in both academic and commercial fields making Distributed Hash Table a valuable resource for researchers and industry professionals. **Java Web Services Unleashed** Robert J. Brunner, 2002 This text provides Java developers with in depth coverage of Web Services technology. It includes contributions from recognised Web Services experts and architects including the Web Services team at IBM. *Sams Teach Yourself J2EE in 21 Days* Martin Bond, 2002 Sams Teach Yourself J2EE in 21 Days introduces the Java 2 Enterprise Edition to Java programmers in 21 straightforward example driven lessons. **Aspect-oriented Programming with AspectJ** Ivan Kiselev, 2003 In a November 2001 Java Pro magazine article noted Java pundit Daniel Savarese states 'The days of Object Oriented Programming may be numbered. One day we may all be using Aspect Oriented Programming. While this may be hyperbole, the AOP brings certain needed improvements to the OOP. AspectJ is a Java based tool that allows

developers to apply standard Java syntax to AOP principles much as C allowed C programmers to use C syntax in an object oriented manner There are AspectJ add ons available for Borland s JBuilder Sun s Forte for Java and for the EMACS text editor Aspect Oriented Programming with AspectJ introduces AOP and the AspectJ tool The book also shows how by using existing Java programming knowledge the developer can use AOP in meaningful development work Identifikation von Musiknoten Martin Schmucker,2007 **EA JXTA**, LI,2001-12-20 **Mastering JXTA** Joseph D. Gradecki,2002-10-15 A comprehensive code intensive guide to building commercial quality peer to peer applications with JXTA and Java Tens of millions of people use peer to peer P2P applications such as KaZaA AOL Instant Messenger and Distributed net These applications harness the idle CPU cycles of their host computers to produce enormous databases of information build powerful processing engines and enable communication and file sharing among users around the world Previously P2P applications have been built using proprietary technologies and protocols forcing developers to start from scratch each time they write a new application Now JXTA an open source P2P development technology enables developers to build P2P applications using Java XML and other industry standards With this invaluable book Joseph Gradecki provides a practical guide to building peer to peer applications using Java He provides detailed descriptions of the JXTA technologies and demonstrates how to build real world applications This book also includes Detailed descriptions of the JXTA specification and the Java reference implementation The complete P2P development process including how to build reusable application frameworks Fully functional example applications including a distributed computational engine that can utilize the idle CPU power of thousands of remote machines to solve complex problems and a fault tolerant encrypted network storage system The companion Web site includes All the code listings and complete applications from the book Links to additional JXTA and P2P resources JXTA in a Nutshell Scott Oaks,Bernard Traversat,Li Gong,2002 Scott Oaks lead author of O Reilly s new JXTA in a Nutshell says Fundamental scalability and centralization forces are constraining the Internet and are restricting its growth Peer to peer networks like JXTA are essential to bring the internet to the next level of scalability management and security in order to handle unconstrained exchanges of information between peers and the wave of new consumer devices Written by the key members of Sun Microsystem s Project JXTA JXTA in a Nutshell is the definitive reference to the most solid platform yet for Peer to Peer distributed computing P2P enables users with the same networking application to connect with each other and directly access files from one another s hard drives JXTA is a giant step forward in the evolution of P2P O Reilly s pioneering reference is the first and last word on this powerful distributed computing technology JXTA in a Nutshell delivers all the information you need to get started including an overview of P2P distributed computing an explanation of the JXTA Project s new platform and ways that developers can become a part of the development effort JXTA in a Nutshell introduces major concepts in a hands on way by explaining them in context to the shell and contains a complete reference to the JXTA application bindings Also included is the full JXTA protocol specification The book covers important topics such as
