Howell,Stefano A. Bini,G. Daxton Steele,2021-06-29 Calipered kinematic alignment was proposed by Dr Stephen M Howell to enable the accurate and individualized placement of total knee components coincident within 0.5 mm of the patient's pre arthritic alignment The aim was to restore the patient's native joint kinematics and thereby address the well documented 20% dissatisfaction when total knee replacement is performed using traditional or mechanical alignment techniques With Dr Stefano A Bini and Dr G Daxton Steele as co editors Dr Howell has curated an international team of expert surgeons and engineers to discuss various aspects of the calipered knee alignment technique in short concise and well illustrated chapters Each author provides clear practical guidance for adopting and implementing calipered kinematic alignment covering manual patient specific navigated and robotic techniques Chapters on component design tailored explicitly for kinematic alignment and showing the close relationship between knee biomechanics and the kinematically aligned TKA help the surgeon manage complex challenges associated with deformity and post operative complications Following the introduction of the calipered kinematic alignment technique for total knee arthroplasty many international studies have shown consistently better patient satisfaction than the traditional mechanical alignment technique Better function and high long term implant survival have catalyzed a paradigm shift in total knee replacement philosophy that is being embraced by orthopedic surgeons and innovative implant companies around the world with excellent results Calipered Kinematically Aligned Knee Arthroplasty is the definitive textbook on the subject and features Thorough explanations of how the calipered kinematic alignment technique for total knee arthroplasty accurately sets total knee components coincident with the patient's pre arthritic alignment and coaligned with the three rotational axes of the native knee A personalized approach to total knee surgery designed to reconstitute the patient's native biomechanics in contrast with mechanical alignment that place all patients in the same standard alignment regardless of their constitutional anatomy Detailed and well illustrated descriptions of manual navigated robotic and patient specific guide techniques that confirm kinematic alignment with a caliper Clinical photos radiographs and line art throughout the book as well as helpful online technique videos Key focus topics such as managing complex deformities the expected post operative recovery and future trends in kinematic alignment The shared experience and knowledge of international pioneers in the field An emphasis on a personalized surgical philosophy which enables same day discharge reduces pain and opioid use and promotes quicker recovery better function and a more natural feeling knee

Mathematical Methods in Survival Analysis, Reliability and Quality of Life Catherine Huber, Nikolaos Limnios, Mounir Mesbah, Mikhail S. Nikulin, 2013-03-01 Reliability and survival analysis are important applications of stochastic mathematics probability statistics and stochastic processes that are usually covered separately in spite of the similarity of the involved mathematical theory This title aims to redress this situation it includes 21 chapters divided into four parts Survival analysis Reliability Quality of life and Related topics Many of these chapters were presented at the European Seminar on Mathematical Methods for Survival Analysis Reliability and Quality of Life in 2006 *Analysis, Design and Evaluation of Man-Machine Systems 1988* J. Ranta, 2014-06-28 This volume provides a state of the art review of the development and future use of man machine systems in all aspects of business and industry The papers cover such topics as human computer interaction system design and the impact of automation in general and also by the use of case studies describe a wide range of applications in such areas as office automation transportation power plants machinery and manufacturing processes and defence systems Contains 73 papers

Enhancing Participation and Governance in Water Resources Management Libor Jansky, Juha I. Uitto, 2005 The United Nations estimates that more than 2 billion people in over 40 countries are negatively affected by water shortages Increasing demand for water has been identified as one of four major factors that will threaten human and ecological health over the next generation As public health development economy and nature suffer ensuring access to clean water is rising towards the top of government agendas Water resources management is the aggregate of policies and activities used to provide clean water to meet human needs across sectors and jurisdictions and to sustain the water related ecological systems upon which we depend Knowledge that is crucial for water management is distributed across governments non governmental organizations and the water users themselves In most circumstances water management aims to address the interests of and integrate usage across hydrologically meaningful units such as watersheds Some management aspects however such as transboundary flows across multiple basins and inter basin water transfers via channels or virtual water may necessitate a broader geographical scope Public participation aims actively to increase attention to and inclusion of the interests of those who are usually marginalized e g politically disenfranchised minorities or poor people indirectly affected by water management In this book the authors identify successful mechanisms approaches and practices for promoting public involvement in water resources management including both conventional approaches and those based on information technology

Simpson,D.S. Henty,D. Nicole,2012-12-06 Over the past decade high performance computing has demonstrated the ability to model and predict accurately a wide range of physical properties and phenomena Many of these have had an important impact in contributing to wealth creation and improving the quality of life through the development of new products and processes with greater efficacy efficiency or reduced harmful side effects and in contributing to our ability to understand and describe the world around us Following a survey of the U K s urgent need for a supercomputing facility for academic research see next chapter a 256 processor T3D system from Cray Research Inc went into operation at the University of Edinburgh in the summer of 1994 The High Performance Computing Initiative HPCI was established in November 1994 to support and ensure the efficient and effective exploitation of the T3D and future generations of HPC systems by a number of consortia working in the frontier areas of computational research The Cray T3D now comprising 512 processors and total of 32 GB memory represented a very significant increase in computing power allowing simulations to move forward on a number of fronts The three fold aims of the HPCI may be summarised as follows 1 to seek and maintain a world class position in computational science and engineering 2 to support and promote exploitation of HPC in industry commerce and business and 3 to support education and training in HPC and its application
