Barrett, Richard E. Silverman, 2001 A guide to the TCP/IP-based network security and privacy solution covers installation, configuration, maintenance, SSH server control, application tunneling, forced commands, port and agent forwarding, and troubleshooting. **Resource Optimization and Security for Cloud Services** Kaiqi Xiong, 2014-02-19 This book includes

a study of trustworthiness, percentile response time, service availability, and authentication in the networks between users and

cloud service providers and at service stations or sites that may be owned by different service providers The first part of the book contains an analysis of percentile response time which is one of the most important SLA service level agreements metrics Effective and accurate numerical solutions for the calculation of the percentile response time in single class and multi class queueing networks are obtained Then the numerical solution is incorporated in a resource allocation problem Specifically the authors present an approach for the resource optimization that minimizes the total cost of computer resources required while preserving a given percentile of the response time In the second part the approach is extended to consider trustworthiness service availability and the percentile of response time in Web services These QoS metrics are clearly defined and their quantitative analysis provided The authors then take into account these QoS metrics in a trust based resource allocation problem in which a set of cloud computing resources is used by a service provider to host a typical Web services application for single class customer services and multipleclass customer services respectively Finally in the third part of the book a thorough performance evaluation of two notable public key cryptography based authentication techniques Public Key Cross Realm Authentication in Kerberos PKCROSS and Public Key Utilizing Tickets for Application Servers PKTAPP a k a KX 509 KCA is given in terms of computational and communication times The authors then demonstrate their performance difference using queueing networks PKTAPP has been proposed to address the scalability issue of PKCROSS However their in depth analysis of these two techniques shows that PKTAPP does not perform better than PKCROSS in a large scale system Thus they propose a new public key cryptography based group authentication technique The performance analysis demonstrates that the new technique can scale better than PKCORSS and PKTAPP
