## **Environmental Economics Paper Topics:**

**Applied Research in Environmental Economics** Christoph Böhringer, Andreas Lange, 2006-03-30 Sustainable development climate policy and biodiversity conservation are examples of issues on the current political agenda in many countries. These themes are also subject to economic research and economic insights are increasingly finding their way into the design of environmental policy. Still, the reception of academic findings by policy makers as well as the timely identification of policy relevant questions by economic researchers often seem to be problematic. This volume attempts to vitalise the exchange between policy makers and academics. It offers a snapshot of environmental economic research on a range of policy relevant problems. Academic contributions are complemented by views of policy makers on priority fields in environmental policy, the usefulness of academic research for decision making and requirements to applied research in the future.

*Topics in Environmental Economics* M. Boman, Runar Brännlund, Bengt Kriström, 1999-07-31 This book shows we believe the breadth and the complexity of issues that economists now tackle in their analysis of the connections between the ecosystem and the economic system. The book offers contributions to such disparate issues as the value of preserving the wolf in Sweden and the proper distribution of permits in an effective global warming treaty. Because these questions remain at the fore front of important resource allocation problems that need to be confronted it is only appropriate that they are represented in a book that intends to paint a picture albeit certainly incomplete of the vibrant and progressing state of environmental economics. The contributions cover five areas of environmental economics: policy instruments, cost benefit analysis, cost efficiency, contingent valuation and experimental economics. Each area is worthy of a book by itself but here we have made a point of focusing on problems that seem directly applicable to the pressing policy issues of today. Thus the contributors address topics that are directly relevant to international and regional policy making as well as those that are linked to development of supporting information systems e.g. resource accounting. In addition the contributions seek to provide high level applications of measurement techniques as well as pertinent critiques of these methods. The next section provides a summary overview of the book.
