scientific investigations and technological innovations in the process chains of machining and forming are discussed as well as comprehensive far sighted overall views on the planning and control of production processes These approaches are supplemented by more interdisciplinary cross sectional topics such as robotics control engineering automation materials technology additive manufacturing and human centered production It is particularly striking that the main approaches presented aim to improve efficiency in production using data driven methods such as machine learning and artificial intelligence However the use of measurement results to improve simulations is also frequently addressed The book proceedings show that transformations can only succeed through the realization of both detailed technical improvements in production technologies and optimized production organization

Balanced Automation Systems for Future Manufacturing Networks Ángel Ortiz Bas, Rubén Dario Franco, Pedro Gomez Gasquet, 2010-06-29 Manufacturing and operations management paradigms are evolving toward more open and resilient spaces where innovation is driven not only by ever changing customer needs but also by agile and fast reacting networked structures Flexibility adaptability and responsiveness are properties that the next generation of systems must have in order to successfully support such new emerging trends Customers are being attracted to be involved in Co innovation Networks as proved responsiveness and agility is expected from industry ecosystems Renewed production systems needs to be modeled engineered and deployed in order to achieve cost effective solutions BASYS conferences have been developed and organized as a forum in which to share visions and research findings for innovative sustainable and knowledge based products services and manufacturing models Thus the focus of BASYS is to discuss how human actors emergent technologies and even organizations are integrated in order to redefine the way in which the value creation process must be conceived and realized BASYS 2010 which was held in Valencia Spain proposed new approaches in automation where synergies between people systems and organizations need to be fully exploited in order to create high added value products and services This book contains the selection of the papers which were accepted for presentation at the BASYS 2010 conference covering consolidated and emerging topics of the conference scope
