Handbook for fisheries socio-economic sample survey: Food and Agriculture Organization of the United Nations, 2018-11-08 This document provides tested and standardized tools to collect the data needed for a socio economic assessment of a fishery including sampling design quality checks and how to transform inputs into statistics **The Bluefin Tuna Fishery in the Bay of Biscay** José Luis Cort, Pablo Abaunza, 2019-02-07 This open access book is an original contribution to the knowledge on fishing and research associated with one of the most enigmatic fish of our seas bluefin tuna *Thunnus thynnus* L Based on available evidence it reconstructs the possible methods used to catch large spawners in the Strait of Gibraltar thousands of years ago and describes the much more recent overfishing that led to a great reduction in the catches of the trap fishery on the area and the disappearance of the northern European fisheries It is the first book to relate the overfishing of juvenile fishes in certain areas to the decline of large spawners in other very distant areas revealing one of the main underlying causes of this decline which has remained a mystery to the fishing sector and scientists alike for over 50 years This finding should serve to prevent similar cases from arising in the future **Fish and Fishery Products Analysis** Saleena Mathew, Maya Raman, Manjusha Kalarikkathara Parameswaran, Dhanya Pulikkottil Rajan, 2019-11-06 This novel and informative book discusses the various aspects of seafood quality The book is divided into 7 broad sections each tackling a different aspect The first section covers the general aspects relevant to the nutritional quality of the fish and the various extraction protocols for macro micro nutrients The second section provides insights into handling and the principles of thermal and non thermal processing techniques for commercially important fishery products The quality standards and safety concerns in the seafood industry and consumption are discussed in this section The freshness indices of the processed products including biochemical microbiological and toxicological characteristics are also included The third section discusses the physico chemical characteristics and quality parameters of potable water ice The fourth section includes the quality assessment of various toxicants related to seafood products The fifth section deals with the specific aspects such as principle instrument and procedures of conventional and novel analytical instruments relevant to the seafood industry The sixth section deals with the seafood waste management including solid and liquid seafood wastes Presently there is a great awareness regarding environmental sustainable processing preservation techniques The final chapter discusses the bioactive compounds from under utilized marine sources showing pharmaceutical nutraceutical applications Field identification guide to the living resources of Myanmar Food and Agriculture Organization of the United Nations, Ministry of Agriculture, Livestock and Irrigation, 2019-12-12 This field guide covers the major resource groups likely to be encountered in the fisheries of Myanmar This includes stomatopods shrimps lobsters crabs bivalves gastropods brachiopods sea cucumbers cephalopods sharks batoids and bony fishes Each resource group is introduced by a general section on technical terms and measurements pertinent to that group and an illustrated guide to orders and families of the group The more important

species are treated in detail with accounts providing scientific nomenclature FAO names in English and French where available local names used in Myanmar diagnostic features one or more illustrations maximum size and notes on fisheries and habitat Colour plates for a large number of the species are included The guide is fully indexed and a list of further literature is appended Co-creating Knowledge with Fishers: Challenges and Lessons for Integrating Fishers' Knowledge Contributions into Marine Science in Well-Developed Scientific Advisory Systems Nathalie A. B.,Gutierrez, N. L.,2024-04-26 In fisheries science and management it is not uncommon that fishery data are used at face value as inputs into data limited assessments or empirical indicator based frameworks for management without first conducting a thorough exploration and critical review of the data Author This practice may lead to biases in results and misdirected fishery management actions Author To address intermediate steps between data collection and any analysis used to inform stock status this manual provides guidance on how to prepare explore and critically review fishery data in data limited situations Author Throughout the manual guidance and sample data are provided primarily in Microsoft Excel or in comma separated value CSV file formats as well as through FishualizeR a publicly available web based R Shiny app that was developed to support the manual Author Instructions in this manual are not intended to present a single prescriptive path but rather to provide guidance that may be further tailored to each individual context Author It is the authors hope and intent that the guidance contained in this manual will allow users to better understand their data make corrections and gain a deeper understanding of the data s utility in assessment and management of data limited fisheries Author Prospects and

Innovations in Fishing Technology Aimed at Achieving Sustainable Fishing Alessandro Lucchetti, Valentina Melli, Jure Brčić, 2023-11-20 Over the last fifty years human exploitation of marine resources has become more efficient as the understanding of the habits and behaviour of the various species available in the sea gradually increased Thus technologies have developed naturally over time and fishing gears and practices have become more sophisticated These technical advances in fishing gear have generally led to more efficient economic fishing operations and better access to resources However fishing implies the harvesting of marine organisms directly from their natural environment therefore general awareness of environmental problems due to the exploitation of fishery resources has also increased In particular the poor selectivity of some gears is responsible for the capture of juveniles immature and undersized specimens of many species with negative consequences on the state of stocks In addition bycatch in marine fisheries is a major source of human caused mortality of marine megafauna often leading to the capture of vulnerable species Finally many bottom towed gears are responsible for high impacts on bottom communities and habitats with cascading consequences on the entire marine ecosystem All these impacts can lead to changes in the structure function and integrity of ecosystems including effects on the food webs and multispecies predator prey relationships
