sophistication in software engineering The least sophisticated are undocumented and dedicated programs developed to solve just one specific problem these tools cannot easily be used by the larger community and have not been included in this volume The next category is a collection of custom made programs some perhaps borrowed from other application domains and organized into libraries sometimes with a rudimentary user interface More recently very sophisticated programs started to appear that integrate advanced graphical user interface and other data analysis tools These are frequently dedicated to just one neural architecture algorithm as for example three layers of interconnected artificial neurons learning to generalize input vectors using a backpropagation algorithm Currently the most sophisticated simulation tools are complete system level environments incorporating the most advanced concepts in software engineering that can support experimentation and model development of a wide range of neural networks These environments include sophisticated graphical user interfaces as well as an array of tools for analysis manipulation and visualization of neural data Neural Network Simulation Environments is an excellent reference for researchers in both academia and industry and can be used as a text for advanced courses on the subject *Springer Handbook of Geographic Information* Wolfgang Kresse,David M. Danko,2012-02-21 Computer science provides a powerful tool that was virtually unknown three generations ago Some of the classical fields of knowledge are geodesy surveying cartography and geography Electronics have revolutionized geodetic methods Cartography has faced the dominance of the computer that results in simplified cartographic products All three fields make use of basic components such as the Internet and databases The Springer Handbook of Geographic Information is organized in three parts Basics Geographic Information and Applications Some parts of the basics belong to the larger field of computer science However the reader gets a comprehensive view on geographic information because the topics selected from computer science have a close relation to geographic information The Springer Handbook of Geographic Information is written for scientists at universities and industry as well as advanced and PhD students [Government-wide Index to Federal Research & Development Reports](#) ,1967
