

General Biology Chapter 3 Study Guide

1. What are the four emergent properties of water that help facilitate life?

The four emergent properties of water that help facilitate life are: cohesive behavior, ability to moderate temperature, expansion upon freezing, and versatility as a solvent.

2. Why is water good at limiting temperature changes?

Water is good at limiting temperature changes because water absorbs heat from warmer air and releases stored heat to cooler air and can absorb or release a large amount of heat with only a slight change in its own temperature.

3. Why does ice float? Why is this important for aquatic organisms?

Ice floats in liquid water because hydrogen bonds in ice are more "ordered," making ice less dense than water. This is important for aquatic organisms because if ice sank, all bodies of water would eventually freeze solid, making life impossible on Earth.

4. What does water's polarity make it a good solvent?

Water's polarity makes it a suitable solvent because it enables the water molecule to attract a wide range of other molecules.
