differs from conventional hard computing in that unlike hard computing it is tolerant of imprecision uncertainty and partial truth In effect the role model for soft computing is the human mind Recently soft computing has to some extent become synonymous with a hybrid approach combining AI techniques including fuzzy systems neural networks and biologically inspired methods such as genetic algorithms Here however we adopt a more straightforward definition consistent with the original concept Hence soft methods are understood as those uncertainty formalisms not part of mainstream statistics and probability theory which have typically been developed within the AI and decision analysis community

These are mathematically sound uncertainty modelling methodologies which are complementary to conventional statistics and probability theory Research Methodology (RM) Prof. Devrshi Upadhyay, Prof. Richa Pandit, Prof. Devina Upadhyay, GTU MBA
