student struggles during this period and thereafter helped dismantle apartheid and usher in a new South African government

Portfolio Theory and Management H. Kent Baker, Greg Filbeck, 2013-01-07 Portfolio management is an ongoing process of constructing portfolios that balances an investor's objectives with the portfolio manager's expectations about the future. This dynamic process provides the payoff for investors. Portfolio management evaluates individual assets or investments by their contribution to the risk and return of an investor's portfolio rather than in isolation. This is called the portfolio perspective. Thus, by constructing a diversified portfolio, a portfolio manager can reduce risk for a given level of expected return compared to investing in an individual asset or security. According to modern portfolio theory (MPT), investors who do not follow a portfolio perspective bear risk that is not rewarded with greater expected return. Portfolio diversification works best when financial markets are operating normally compared to periods of market turmoil such as the 2007-2008 financial crisis. During periods of turmoil, correlations tend to increase, thus reducing the benefits of diversification. Portfolio management today emerges as a dynamic process which continues to evolve at a rapid pace. The purpose of Portfolio Theory and Management is to take readers from the foundations of portfolio management with the contributions of financial pioneers up to the latest trends emerging within the context of special topics. The book includes discussions of portfolio theory and management both before and after the 2007-2008 financial crisis. This volume provides a critical reflection of what worked and what did not work, viewed from the perspective of the recent financial crisis. Further, the book is not restricted to the U.S. market but takes a more global focus by highlighting cross-country differences and practices. This 30-chapter book consists of seven sections. These chapters are: 1. portfolio theory and asset pricing; 2. the investment policy statement and fiduciary duties; 3. asset allocation and portfolio construction; 4. risk management; 5. portfolio execution, monitoring, and rebalancing; 6. evaluating and reporting portfolio performance; and 7. special topics.

The National Liberation Struggle in South Africa Gregory F. Houston, 2019-05-23 First published in 1999, this volume follows the interactions between the United Democratic Front (UDF) and the African National Congress (ANC) and Pan Africanist Congress (PAC), which had adopted more revolutionary strategies after their banning in 1960. Over the period 1983-87, only a few studies of the UDF have aimed to link revolutionary developments in 1980s South Africa with theories of revolutionary strategy and tactics. This volume focuses on the relation between revolutionary theory/praxis and the formation, aims, policies, and practices of the UDF. Houston argues that the formulation of the UDF met certain strategic and tactical requirements of Lenin and Gramsci's theories of revolutionary strategy, repositioning the UDF as becoming a Leninist vanguard party with its affiliate membership operating largely underground. The volume features 6 detailed maps of the Cape Town area, the Republic of South Africa in the 1980s, the Johannesburg area, the Durban area, the Pretoria area, and the Northern Transvaal.
