Researchers have recently reinvigorated the idea that key features associated with a capitalist organization of the economy render nation states internally and externally more peaceful. According to this adage, the contract intensity of capitalist societies and the openness of the economy are among the main attributes that drive these empirical relationships. Studies on the Capitalist Peace supplement the broadly received examinations on the role that economic integration in the form of trade and foreign direct investment play in the pacification of states. Some proponents of the peace through capitalism thesis controversially contend that this relationship supersedes prominent explanations like Democratic Peace, according to which democratic pairs of states face a reduced risk of conflict. This volume takes stock of this debate. Authors also evaluate the theoretical underpinnings of the relationship and offer an up to date idea history and

classification of current research Leading scholars comment on these theoretical propositions and empirical findings This book is an extended and revised version of a special issue of International Interactions Proceedings of the International Conference on Paradigms of Computing, Communication and Data Sciences Mayank Dave,Ritu Garg,Mohit Dua,Jemal Hussien,2021-02-19 This book presents best selected papers presented at the International Conference on Paradigms of Computing Communication and Data Sciences PCCDS 2020 organized by National Institute of Technology Kurukshetra India during 13 May 2020 It discusses high quality and cutting edge research in the areas of advanced computing communications and data science techniques The book is a collection of latest research articles in computation algorithm communication and data sciences intertwined with each other for efficiency
