RUNX Proteins in Development and Cancer Yoram Groner, Yoshiaki Ito, Paul Liu, James C. Neil, Nancy A. Speck, Andre van Wijnen, 2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes As highlighted in the introduction and several of the 29 chapters humans and other mammals have three RUNX genes that are known to play specific roles in blood bone and neuronal development However their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well known signaling pathways Wnt TGF β Notch Hippo is indicative of a more general function in cell biology Their documented roles in cell fate decisions include control of proliferation differentiation survival senescence and autophagy The pleiotropic effects of RUNX in development are mirrored in cancer where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes In the latter role they display hallmarks of both gatekeepers that modulate p53 responses and caretakers that protect the genome from DNA damage Several chapters focus on the importance of these genes in leukemia research where RUNX1 and CBF β are frequently affected by chromosomal translocations that generate fusion oncoproteins while recent studies suggest wider roles for RUNX modulation in solid cancers Moreover RUNX genes are intimately involved in the development and regulation of the immune system while emerging evidence suggests a role in innate immunity to infectious agents including HIV At the biochemical level the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis Not surprisingly RUNX activity is controlled at multiple levels this includes miRNAs and a plethora of post translational modifications Several chapters highlight the interplay between the three mammalian RUNX genes where cross talk and partial functional redundancies are evident Finally structural analysis of the RUNX CBF β interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy This volume provides a compendium and reference source that will be of broad interest to cancer researchers developmental biologists and immunologists

Tschudin,Craig Moffat,Stephen Buchanan-Clarke,Susan Russell,Lloyd Coutts,2019-06-18 Over the past two decades the rapid emergence and spread of both local and transnational extremist organisations has become a primary source of insecurity in Africa Extremist organisations represent the fluid and variable nature of conflict systems today and are at the heart of some of Africa s most enduring conflicts Moreover the inability of African states to contain the threat of extremism or of heavy handed security responses has led to the loss of thousands of lives displaced millions and deeply impacted the continent s democratisation and development goals This is the second anthology published by Good Governance Africa GGA on the topic of extremism and political violence in Africa Extremisms in Africa one of the first anthologies of its kind on this topic to be authored and published on the African continent provided an account of how extremist groups arose in Africa and the various ways in which they have harnessed their global agendas to local conflict dynamics and structural challenges enabling them to exploit the grievances of individuals and communities for their cause This anthology Extremisms in Africa Volume 2 looks forward giving special attention to the ways in which emergent trends global geopolitics and conflict dynamics merge to impact upon the African continent To this end we have sought to engage diverse topics ranging from ecological concerns surrounding climate change and migration the implications of such human movement for modern day trafficking and slavery and the roles of women and youth State responses to extremisms on the African continent are not uniform the capacity of individual states to detect identify police investigate and prosecute is highly variable At the most fundamental level extremisms are ripe to arise in contexts where governments are failing especially when democracy is on the wane This anthology identifies some of the most pressing challenges in addressing extremisms today and provides chapters that could offer actionable policy insights to governments and civil society Given the nature of Africa s geopolitical landscape state and security services alone cannot prevent extremism It will take a whole of society approach where government civil society academia communities families and individuals collaborate to better understand the local dynamics of recruitment and radicalisation and develop context specific strategies in response This anthology will hopefully provide practitioners with improved insight into some of the key challenges and potential solutions in preventing extremism while also being of interest to the general reader **Roles of Liver Sinusoidal Endothelial Cells in Liver Homeostasis and Disease** Patricia
