Mediatized China-Africa Relations Shubo Li, 2017-10-24 This cutting edge book explores the role of the media in the highly disputed area of China Africa relations notably how various aspects of the issue have been portrayed negotiated and contested in media and academic discourses As Africa's biggest trading partner and creditor China explores Africa not only as a marketplace for importing primary commodities and exporting manufactured goods but also as a preferred testing ground for its media and telecommunication sector aspiring for further internationalization At a time when the influence from Global North has been on the wane in the continent emerging powers are regarded as new inspirations for Africa's development China in particular tries to bolster multipolarity in Africa by factoring in media influence and facilitating the digitalization process of the continent This book offers an up to date geopolitical analysis of China Africa examining the role

of communication and telecommunication in the power shift especially in constructing social and cultural realities in which the idea of development has been recurrently redefined and negotiated in the public domain This volume tackles the issue from the new perspective of mediatization considering how the media on the one hand shapes public opinion with its narratives and a logic of its own and on the other hand simultaneously becomes an integrated part of other institutions like politics trade business as more of these institutional activities are performed through both interactive and mass media

David Shambaugh, 2013-01-18 Most global citizens are well aware of the explosive growth of the Chinese economy Indeed China has famously become the workshop of the world Yet while China watchers have shed much light on the country's internal dynamics China's politics its vast social changes and its economic development few have focused on how this increasingly powerful nation has become more active and assertive throughout the world In *China Goes Global* eminent China scholar David Shambaugh delivers the book that many have been waiting for a sweeping account of China's growing prominence on the international stage Thirty years ago China's role in global affairs beyond its immediate East Asian periphery was decidedly minor and it had little geostrategic power Today however China's expanding economic power has allowed it to extend its reach virtually everywhere from mineral mines in Africa to currency markets in the West to oilfields in the Middle East to agribusiness in Latin America to the factories of East Asia Shambaugh offers an enlightening look into the manifestations of China's global presence its extensive commercial footprint its growing military power its increasing cultural influence or soft power its diplomatic activity and its new prominence in global governance institutions But Shambaugh is no alarmist In this balanced and well researched volume he argues that China's global presence is more broad than deep and that China still lacks the influence befitting a major world power what he terms a partial power He draws on his decades of China watching and his deep knowledge of the subject and exploits a wide variety of previously untapped sources to shed valuable light on China's current and future roles in world affairs *The Cambridge Handbook of Technical*

Visions of a Digital Nation Jacob Ward, 2024-02-06 Why the privatization of British Telecom signaled a pivotal moment in the rise of neoliberalism and how it was shaped by the longer development and digitalization of Britain's telecommunications infrastructure When Margaret Thatcher sold British Telecom for 3.6 billion in 1984 it became not only at the time the largest stock flotation in history but also a watershed moment in the rise of neoliberalism and deregulation In *Visions of a Digital Nation* Jacob Ward offers an incisive interdisciplinary perspective on how technology prefigured this pivot Giving due consideration to the politicians engineers and managers who paved the way for this historic moment Ward illustrates how the decision validated the privatization of public utilities and tied digital technology to free market rationales In this examination of the national and at times global history of technology Ward's approach is sweeping Utilizing infrastructure studies environmental history and urban and local history Ward explores Britain's nationalist and welfarist plans for a digital information utility and shows how these projects contested and adapted to the market turn under Margaret Thatcher Ultimately *Visions of a Digital Nation* compellingly argues that politicians did not impose neoliberalism top down but that technology engineers and managers shaped these politics from the bottom up
