The study of the ancient world is usually although not exclusively considered a branch of the humanities including archaeology, art history, languages, literature, philosophy, and related cultural disciplines which consider the ancient cultures of the Mediterranean world and adjacent Egypt and southwestern Asia. Chronologically, the ancient world would extend from the beginning of the Bronze Age of ancient Greece ca 1000 BCE to the fall of the Western Roman Empire ca 500 CE. This book will close the traditional subject gap between the humanities, Classical World, Egyptology, and the social sciences, anthropological archaeology, Near East in the study of the ancient world. This book is uniquely the only bibliographic resource available for such holistic coverage. The volume consists of 17 chapters and seven appendixes arranged according to the traditional types of library research materials: bibliographies, dictionaries, atlases, etc. The appendixes are mostly subject specific, including graduate programs in ancient studies, reports from significant archaeological sites, numismatics, and paleography and writing systems. The Abu Bakr Cemetery at Giza Edward Brovanski, Tohfa Handoussa, 2021-07-31 The present volume reflects the work of the joint expedition of Cairo University and Brown University to record and publish the tombs uncovered on behalf of Cairo University by Prof Abdel Moneim Abu Bakr from 1949 through 1953 but never published. The loss of field records and lack of a map of the site meant that new salvage excavation had to be undertaken. A total of six seasons from 2000-2006 resulted in the clearing, remapping, and recording of the monuments in the cemetery. Abu Bakr Cemetery is of particular interest because the majority of mastaba tombs belong to relatively low-ranking individuals. Thus, they have the potential to shed light on the social status of Egypt's working classes. **Bioarchaeology** Mark Q. Sutton, Eric J. Bartelink, 2025-05-21 Bioarchaeology covers the history and general theory of the field plus the recovery and laboratory treatment of human remains. Bioarchaeology is the study of human remains in context from an archaeological and anthropological perspective. The book explores through numerous case studies how the ways a society deals with their dead can reveal a great deal about that society, including its religious, political, economic, and social organizations. It details recovery methods and how once recovered human remains can be analyzed to reveal details about the funerary system of the subject society and inform on a variety of other issues such as health, demography, disease, workloads, mobility, sex, and gender, and migration. Finally, the book highlights how bioarchaeological techniques can be used in contemporary forensic settings.
