Suzanne K. Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified The aviation industry is moving away from an hours based to a competency based training system Within this approach training is complete when a learner can demonstrate competent performance Training based on competency is an increasingly popular approach in aviation It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs However there are also challenges with a competency based approach The definition of competency based education can be confusing training can be reductionist and artificially simplistic professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden Competency Based Education in Aviation Exploring Alternate Training Pathways explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields Research based and practical strategies for the effective creation delivery and assessment of competency based education are described in detail

Legal Priorities in Air Transport Ruwantissa Abeyratne, 2019-05-27 Against the backdrop of enormous technological strides this book argues that the air transport industry must be constantly vigilant in its efforts to employ a legal regime that is applicable to the aeronautical and human aspects of the carriage by air of persons and goods In this regard safety and security are of the utmost importance both in terms of safe air navigation and the preservation of human life Although the International Civil Aviation Organization ICAO addresses legal issues through its Legal Committee many emerging issues that urgently require attention lie outside the Committee s purview This book analyzes in detail the items being considered by ICAO s Legal Committee considers the legal nature of ICAO and discusses whether or not ICAO s scope should be extended Since the limited issues currently addressed by ICAO do not reflect the rapidly changing realities of air transport the book also covers a broad range of key issues outside the parameters set by ICAO such as the need to teach air law to a new generation of aviation professionals combating cyber crime and cyber terrorism the regulation of artificial intelligence traveller identification interference with air navigation human trafficking unruly passengers climate change air carrier liability for passenger death or injury Remotely Piloted Aircraft Systems drones and the cabin crew and their legal implications Compendium of International Civil Aviation Adrianus D. Groenewege, 1996 **Aircraft Maintenance and Engineering** Mr. Rohit Manglik, 2023-09-23 Covers principles of aircraft systems inspection techniques repair procedures and maintenance regulations to ensure airworthiness and safety *Aviation Food Safety* Erica Sheward, 2008-04-15 The provision of safe food to airline passengers is now a multi billion dollar industry worldwide As the aviation industry continues

to grow year on year so do passenger food service expectations with increasing demand for wider choice and greater quality. Often neglected and under regulated food safety should be of paramount importance amid this growth. In this much needed book Erica Sheward makes a compelling case for better management of food safety for all aspects of the aircraft food supply chain.
