Legume Breeding in Transition: Innovation and Outlook Rafiul Amin Laskar, Aamir Raina, Samiullah Khan, Nasya Borisova Tomlekova, Waltram

Ravelombola, Mahendar Thudi, 2023-09-06 Legumes family Fabaceae comprise a diverse range of crops grown worldwide which are important constituents of sustainable agriculture and harbour a role in improving human and livestock health

Legumes serve as a rich source of plant based proteins rank second in nutrition value after cereals and are ideal to supplement a protein deficient cereal based human diet Legumes also provide other essential services to agriculture through

their ability to fix atmospheric nitrogen recycle nutrients enhance soil carbon content and diversify cropping systems Legume production and seed quality are affected by a range of biotic pests insect diseases and weeds and abiotic stresses drought heat frost and salinity In addition to this rapidly changing climate shrinking arable land erratic rainfalls and depleting water and other natural resources impact legume production and threaten food and nutrition security worldwide Persistent demand for legume crops is existing to fulfil the food requirements of an ever growing human population Therefore legume breeders and geneticists have employed different conventional and modern breeding strategies to improve yield resistance to biotic and abiotic stresses grain quality and nutritional and nutraceutical properties Conventional breeding strategies are laborious time consuming expensive and inefficient to achieve the desired goals However advanced breeding techniques such as alien gene introgression genomics assisted breeding transgenic technology speed breeding association and mapping studies genome editing and omics will contribute to sustainable agriculture and food security
