Digital Innovation and the Future of Work Hans Schaffers, Matti Vartiainen, Jacques Bus, 2022-09-01

The concept of digitalization captures the widespread adoption of digital technologies in our lives in the structure and functioning of organizations and in the transformation of our economy and society. Digital technologies for data processing and communication underly high impact innovations including the Internet of Things, wireless multimedia, artificial intelligence, big data, enterprise platforms, social networks and blockchain. These digital innovations not only bring new opportunities for prosperity and wellbeing but also affect our behaviors, activities and daily lives. They enable and shape new forms of production and new working practices in sectors such as manufacturing, healthcare, logistics and supply chains, energy and public and business services. Digital innovations are not purely technological but form part of comprehensive systemic innovations of a sociotechnical and networked nature requiring the alignment of technology, processes, organizations and humans. Examples are platform-based work, customer-driven value creating networks and urban public service systems. Building on widespread networking, algorithmic decisions and sharing of personal data, these innovations raise intensive societal and ethical debates regarding key issues such as data sovereignty and privacy intrusion, business models based on data surveillance and negative externalization, quality of work and jobs and market dominance versus regulation. In this context, this book focuses on the implications of digitalization for the domain of work. The book studies the changing nature of work as well as new forms of digitally enabled organizations, work practices and cooperation. The book sheds light on the technological, economic and political forces shaping the new world of work and on the prospects for human-centric and responsible innovations.
