Constantly high student dropout rates in STEM subjects at German universities which could be the result of low course success in introductory laboratory courses among other things and increasing criticism about their quality and effectiveness necessitate these laboratory courses to be examined thoroughly This study investigated the learning goals of the General Chemistry laboratory course for first year students in teacher training and factors for course success in order to make statements about the significance of laboratory courses for university education particularly for long term study success For this purpose a theoretical model that assumes the students prior knowledge and learning goal alignment between students and their lab instructors to be two defining factors for lab course success was used as a framework

**Designing for Situated Knowledge Transformation** Nina Bonderup Dohn, Stig Børsen Hansen, Jens Jørgen Hansen, 2019-11-27 How can knowledge developed in one context be put to use in other contexts How can students learn to do so How can educators design for learning this These are fundamental challenges to many forms of education The challenges are amplified in contemporary society where people traverse many different contexts and where contexts themselves are continuously changing Designing for Situated Knowledge Transformation provides a structured answer to these questions through an investigation of the theoretical empirical methodological and pedagogical design aspects which they involve Raising profound questions about the nature of knowledge of situativity and of transfer transformation and resituation it calls for and provides extended empirical studies of the forms of transformation that knowledge undergoes when people find themselves in new contexts while relying on existing knowledge Considering many avenues of practical application and insight Designing for Situated Knowledge Transformation develops a coherent framework for developing learning designs for knowledge transformation that is crucial in today s educational settings

**Apprehension** Lynn Holt, 2016-04-08 This book introduces and explores the role of apprehension in reasoning setting out the problems determining the vocabulary fixing the boundaries and questioning what is often taken for granted Lynn Holt argues that a robust conception of rationality must include intellectual virtues which cannot be reduced to a set of rules for reasoners and argues that the virtue of apprehension an acquired disposition to see things correctly is required if rationality is to be

defensible Drawing on an Aristotelian conception of intellectual virtue and examples from the sciences Holt shows why impersonal standards for rationality are misguided why foundations for knowledge are the last elements to emerge from inquiry not the first and why intuition is a poor substitute for virtue By placing the current scene in historical perspective Holt displays the current impasse as the inevitable outcome of the replacement of intellectual virtue with method in the early modern philosophical imagination Written in an engaging and jargon free style this book is of interest to a wide range of readers particularly epistemologists and philosophers of science concerned with the fate of reason **SourceBook Version 2.1** ,1998 **The Laboratory Quality Assurance System** Thomas A.
