Learning Mathematics in a Mobile App-Supported Math Trail Environment Adi Nur Cahyono, 2018-07-19 This brief presents the results of a study on the development of the mobile app supported math trail program for learning mathematics This study is a part of the MathCityMap Project a project of the MATIS I Team from IDMI Goethe University Frankfurt Germany that comprises math trails around the city that are supported by the use of GPS enabled mobile phone technology The project offers an activity that is designed to support students in constructing their own mathematical knowledge by solving the

prepared mathematical tasks on the math trail and interacting with the environment including the digital environment The brief focuses specifically on the development of a model for a mobile app supported math trail programme and the implementation of this programme in Indonesia It offers both an empirical exploration of its implementation as well as critical assessment of students motivation in mathematics their own performance as well as teachers mathematics beliefs It concludes with a future forward perspective by recommending strategies for implementation in schools among the general public of the existing math trails including its supporting tool It also discusses strategies for developing and designing new trails and suggests further research in other geographical regions and contexts for continued project development and implementation Learning Mathematics in a Mobile App Supported Math Trail Environment articulates an innovative and exciting future for integrating real mathematical tasks and geographic and digital environment into effective mathematics education

Topics in Mathematics For Elementary Teachers Sergei Abramovich, 2024-01-01 This is the second revised edition of the book published in 2010 under the same title It reflects the author s experience teaching a graduate level mathematics content course for elementary teacher candidates at SUNY Potsdam since 2003 The book addresses a number of recommendations of the Conference Board of the Mathematical Sciences for the preparation of teachers demonstrating how abstract mathematical concepts can be motivated by concrete activities and the use of technology Such approach to school mathematics makes it easier for teachers to grasp the meaning of generalization formal proof and the creation of an increasing number of concepts on higher levels of abstraction The book s computer enhanced pedagogy and its strong experiential component enabled by the use of manipulative materials have the potential to reduce mathematics anxiety among teachers and help them develop confidence in teaching the subject matter through modeling and problem solving Classroom observations of teachers learning mathematics as a combination of theory and experiment confirm that this approach elevates one s mathematical understanding to a higher ground Most of the chapters are motivated by a problem typically found in the elementary mathematics curricula and or standards either National or New York State the context in which the author prepare teachers By exploring traditional problems in depth teachers can uncover fundamental mathematical concepts and ideas hidden within a seemingly mundane task The need to have experience in going beyond traditional expectations for learning is due to the constructivist orientation of contemporary mathematics pedagogy that encourages students to ask questions about mathematics they study Each chapter except the last one includes an activity set that can be used for the development of the variety of assignments for teachers Digital tools used in the book include spreadsheets Wolfram Alpha GeoGebra Kid Pix Studio Deluxe and Graphing Calculator Pacific Tech

Visualisation and Epistemological Access to Mathematics Education in Southern Africa Marc Schäfer, 2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well resourced and under resourced schools in Southern Africa Drawing on

classroom research conducted in the Southern African region it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research based solutions and recommendations The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers academics and post graduate students of mathematics education comparative education and social justice education

Clements, Julie Sarama, 2004 Engaging Young Children in Mathematics Standards for Early

Childhood Mathematics Education brings together the combined wisdom of a diverse group of experts involved with early childhood mathematics. The book originates from the landmark 2000 Conference on Standards for Pre kindergarten and Kindergarten Mathematics Education attended by representatives from almost every state developing standards for young children's mathematics. Federal government officials, mathematicians, mathematics educators, researchers from mathematics education, early childhood education and psychology, curriculum developers, teachers, policymakers and professionals from organizations such as the National Conference of Teachers of Mathematics and the National Association for the Education of Young Children. The main goal of the Conference was to work collectively to help those responsible for framing and implementing early childhood mathematics standards. Although it has its roots in the Conference, the expanded scope of the standards and recommendations covered in this book includes the full range of kindergarten to grade 2. The volume is organized into two main parts and an online appendix <http://www.gse.buffalo.edu/org/conference>. Part One, Major Themes and Recommendations, offers a framework for thinking about pre kindergarten grade 2 mathematics education and specific recommendations. Part Two, Elaboration of Major Themes and Recommendations, provides substantive detail regarding young students' understandings of mathematical ideas. Each Part includes five parallel subsections: Standards in Early Childhood Education, Math Standards and Guidelines, Curriculum, Learning, Teaching and Assessment, Professional Development and Toward the Future Implementation and Policy. As a whole, the book presents comprehensive summaries of research that provide specific guidelines for standards, curriculum and teaching, takes the recent reports and recommendations for early childhood mathematics education to the next level, integrates practical details and research throughout and provides a succinct but thorough review of research on the topics: sequences and learning trajectories that children can and should learn at each of their first years of life with specific developmental guidelines that suggest appropriate content for each topic for each year from 2 year olds to 7 year olds. This is an indispensable volume for mathematics educators, researchers, curriculum developers, teachers and policymakers including those who create standards, scope and sequences and curricula for young children and professional teacher development materials and students in mathematics education, early childhood, trainers, teacher educators and faculty in mathematics education.

Elementary Mathematics Curriculum Materials

Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16. The book presents comparative analyses of five elementary mathematics curriculum programs used in the U.S. from three different perspectives: the mathematical emphasis, the pedagogical approaches and how authors communicate with teachers. These perspectives comprise a framework for examining what curriculum materials are comprised of, what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process. Although the focus of the analysis is 5 programs used at a particular point in time, this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general. Our analysis of the mathematical emphasis considers how the mathematics content is presented in

each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors

New Formulas for America's Workforce ,2003 *Problem Posing and Problem Solving in Mathematics Education* Tin Lam Toh,Manuel Santos-Trigo,Puay Huat Chua,Nor Azura Abdullah,Dan Zhang,2024-01-01 This book presents both theoretical and empirical contributions from a global perspective on problem solving and posing PS PP and their application in relation to the teaching and learning of mathematics in schools The chapters are derived from selected presentations in the PS PP Topical Study Group in ICME14 Although mathematical problem posing is a much younger field of inquiry in mathematics education this topic has grown rapidly The mathematics curriculum frameworks in many parts of the world have incorporated problem posing as an instructional focus building on problem solving as its foundation The juxtaposition of problem solving and problem posing in mathematics presented in this book addresses the needs of the mathematics education research and practice communities at the present day In particular this book aims to address the three key points to present an overview of research and development regarding students mathematical problem solving and posing to discuss new trends and developments in research and practice on these topics and to provide insight into the future trends of mathematical problem solving and posing
