2.13 Power Supply

Basic requirements

The machine is designed for a power supply conforming to EN 60204-1 (IEC 60204-1), section 4.3. In the absence of other user-specified conditions, the limits laid down in this standard must be adhered to.

It is recommended that the user and the supplier reach an agreement on the basis of the EN 60204-1, Annex B.

The machine requires a symmetrical three-phase power supply.

In a symmetrical three-phase supply the phase displacement and voltages are equal for all phases.

The machine may only be operated from an earthed TN or TT three-phase supply.

Connection to an IT supply is not permitted without taking further measures (earth leak detection, etc.).

This machine is designed for the operation in an industrial environment with proprietary supply network separated from the public supply by a transformer or generator.

Incoming line within the switching cabinet to be as short as possible.

If external sensors or communications lines are to be connected to the machine, use shielded cables and insert the same through EMC connections into the switching cabinet.

2.14 Power supply specifications

The following supply cable conductor cross sections (copper multi-core) and fusing (slow-blow class gG) are selected according to German DIN VDE 0100-430 (IEC 60364-4-43 and IEC 60364-4-473) and DIN VDE 0298-4 (HD 384.5.523 S2) standards for 30 °C ambient temperature and wiring type C.
