Volume of Cylinders and Cones

Meet my friends Cecil and Cory! They love each other so much - almost as much as they love Geometry.

Cecilia and Cory are weirdly obsessed with cylinders and cones (can you tell why?). They love them so much, that their entire lives revolve around these 3-Dimensional figures. Check this out!

Cecil and Cory live in a perfectly cylindrical home topped off with a cone shaped roof.

Cecil and Cory wear hats that are composed of a cylinder and a cone. Below is a diagram.

Calculate the volume of their home.

$$Base = \pi r^2 \cdot h = 4,069.44$$

$$+ \pi r^2 \cdot h = 2,411.52$$

$$Total = 6,480.96 \text{ units}^3$$

Calculate the volume of the 2 hats.

$$5\pi = 78.5 \times 2 = 157 \text{ cylinder}$$

$$5\pi = 78.5 \times \frac{13}{3} = 340.17$$

$$497.17 \text{ cm}^3$$

Lesson 6 10 Spheres Problem Solving

Paul A. Tipler, Gene Mosca

Lesson 6 10 Spheres Problem Solving:

Maths Problem Solving Year 3 Catherine Yemm, 2011-03-08 Maths Problem Solving Year 3 is the third of six books in the Maths Problem Solving series. The books have been written for teachers to use during the numeracy lesson. They cover the solving problem objectives from the numeracy framework. This book contains three chapters: Making decisions, Reasoning about numbers or shapes, and Problems involving real life money or measures. The books are designed in such a way that each section has six stages of questions to be worked through. Every stage is split into three levels for example 1a, 1b, or 1c based on achievement. Each corresponding question from these levels follows the same line of questioning so that when the teacher talks about a certain question, the solution process is the same for each level but the complexity of the sum varies.

Concepts of Electromagnetic Theory Prof. Yosry Moustafa, 2023-02-21 This book includes thirteen chapters covering the principles of electromagnetic field theory where chapter one gives an introduction of vector analyses while chapter two introduces the basics of electrostatics. Chapter three covers the solution to electrostatic problems. Chapter four explains the electrostatic field in dielectric media while chapter five studies the microscopic theory of dielectrics. In chapter seven the continuity equation of the electric current is derived and explained and in chapter eight the magnetic field of steady current is explored and discussed. In addition, chapter nine has covered and interpreted electromagnetic induction and in chapter ten the magnetic properties of matter have been discussed and formulated. In chapter eleven the concept of magnetic energy has been discussed and elicited. Finally, in chapter twelve Maxwell's equations have been presented and discussed and chapter 13 includes general solved problems. This book is intended primarily as a textbook for physics and electrical engineering students at the undergraduate or beginning graduate level. In addition, we hope the book may be useful as a base for research workers too.
