sheds new light on the first government scientific funding body the Board of Longitude established to administer vast reward money for anyone who found a means of accurately measuring longitude at sea Meet the cast of characters involved in the search for longitude from famous novelists and artists to almost unknown pamphleteers and inventors and see how their interactions informed the fate of longitude s most famous pursuer the clockmaker John Harrison *Maps, Their History,*

The Book of Jasher is twice mentioned in the Bible In order to distinguish this work from the Pseudo Jasher it carries the title The Ancient Book of Jasher The transcript has been carried out faithfully except for a number of minor amendments It is a shame that in most publications of the Book of Jasher the supportive documents that prove its origin are missing as if evidence that testifies to its veracity is difficult to bear But here they are What is new is a division in sections which makes easy reading You ll find a good Analytical Index and that s always helpful The preliminary remarks made by the present publisher gives a better feel about the authenticity of this truly amazing book that by the way is still being printed in the original Hebrew in a mode of writing that carries the patina of its age **American Practical Navigator: Text and**

Arabic treatise on Ptolemaic astronomy ever written. Composed in the early 13th century, this introductory textbook played a crucial role in the teaching, dissemination, and institutional instruction of Islamic astronomy well into the 19th century and beyond. Establishing the base text is a fundamental prerequisite for gaining insights into what was considered an elementary astronomical textbook in Islam and also for understanding the extensive commentary tradition that built upon it. Within this volume, the *Mulakhkha* is situated within the broader context of the genre of literature termed *ilm al hay'a*, which has become the subject of intensive research over the past 25 years. In so doing, it provides a survey of summary accounts of theoretical astronomy of *Jaghmn's* predecessors, both Ancient and Islamic, which could have served as potential sources for the *Mulakhkha*. *Jaghmn's* dates, which until now remained unsettled, are established, and it is definitively shown that he composed not only the *Mulakhkha* but also other scientific treatises, including the popular medical treatise *al-Qin'a*, during a period that has been deemed one of scientific decline and stagnation in Islamic lands. The book will be of particular interest to scholars engaged in the study of Islamic theoretical astronomy but is accessible to a general readership interested in learning what constituted an introduction to Ptolemaic astronomy in Islamic lands.
