Forensic Face Matching Markus Bindemann, 2021-01-07 In everyday life we identify faces regularly and seemingly with great ease One might assume this to be a straightforward and highly accurate task However we are poor at identifying the faces of unfamiliar people who we have never met before despite the fact that many important everyday tasks depend on this Forensic face matching requires the comparison of two face photographs of a person who is not known to the observer This seemingly simple task is critical for a wide range of security tasks such as person identification at airports and borders passport issuance and renewal and criminal identification in police investigations Despite its ubiquity face matching is highly prone to error even under conditions that are designed to maximally facilitate this task For this reason face matching has been studied extensively in Psychology with the bulk of the research conducted since 2010 Forensic face Matching provides readers with a wide ranging detailed and critical overview of facial comparison and face matching providing insights into its application efficacy and limitations in occupational settings and of current scientific knowledge of this task Face

Khan, 2025-05-14 Natural language processing has changed a lot recently due to the advances in language models In the past helping computers understand human language was a challenging task Some primitive techniques were used but they were not very effective It is because human language is complex and has many nuances This makes it difficult to model mathematically For example the probability model of language with a lot of exceptions would render it useless The recent advances in transformer based language models is not to assume anything about the language but to ask the computer to learn from the data In this way you will not get a mathematically clean model You cannot even write it down as equations But it works very well in practice The blossom of trendy new applications such as ChatGPT is an evidence of this Creating a transformer based language model is costly But using one is not There are a lot of open source language models available that you can use even on your own computer However you must know how to use them This includes to know what the model can do what format of data it can accept and what it will produce how to get the source code of the model and use it and how to load the model weights That s a lot of details This ebook gives you practical examples of how to use the most popular

language models that a commodity computer can run This uses the Hugging Face Transformers library probably the simplest way to use the most popular language models The ebook is not a tutorial on the library nor how the language models work As an NLP practitioner neither of them is important The focus of this ebook is to give you practical examples on what the language models can do and how to use them for a variety of NLP tasks without knowing the detailed mechanisms behind them
