Facing the Consequences W.H. Schmidt, Curtis C. McKnight, Leland S. Cogan, Pamela M. Jakwerth, Richard T. Houang, 2007-05-08 Facing the Consequences presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study TIMSS. TIMSS is the most extensive and far reaching cross national comparative study of mathematics and science education ever attempted. It includes comparing official curricula, textbooks, teacher practices, and student achievements for many countries from 20 to 50 countries depending on the particular comparison. Thousands of official documents and textbooks were analyzed. Thousands of teachers, principals, and other experts responded to survey questionnaires. A sample of mathematics teachers in three countries had their lessons videotaped. Hundreds of thousands of children in almost 50 countries were tested in mathematics and science. This report presents a closer look at US mathematics and science education through careful examination of TIMSS data. The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be. Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data, the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education.

Facing up to Arrangements: Face-Count Formulas for Partitions of Space by Hyperplanes Thomas Zaslavsky, 1975 An arrangement of hyperplanes of Euclidean or projective d space is a finite set of hyperplanes together with the induced partition of the space. Given the hyperplanes of an arrangement, how can the faces of the induced partition be counted? Heretofore this question has been answered for the plane, Euclidean 3 space, hyperplanes in general position, and the d faces of the hyperplanes through the origin in Euclidean space. In each case the numbers of k faces depend only on the incidences between intersections of the hyperplane, even though arrangements with the same intersection incidence pattern are not in general combinatorially isomorphic. We generalize this fact by demonstrating formulas for the numbers of k faces of all Euclidean and projective arrangements, and the numbers of bounded k faces of the former as functions of the semi lattice of intersections of the hyperplanes, not dependent on the arrangement's combinatorial type.

Communication and Creativity in the Math Classroom Nicholas J. Rinaldi, 2013-12-03 Whether you are a new or an experienced teacher, Communication and Creativity in the Math Classroom provides you with classroom tested activities and ideas which are motivating, engaging, and meaningful to students. Traditional textbooks commonly feature conventional, unengaging, and somewhat boring problems and activities. Communication and Creativity in the Math Classroom provides you with activities and ideas which stress life skills such as communicating more effectively, being creative, analyzing a variety of problems, following directions, and

working cooperatively with others These skills are very valuable but are rarely addressed in the traditional math curriculum The materials and ideas in this book allow you to interject these skills into your daily lessons while covering various mathematical topics Many of the easily reproducible activities can be used as assessments consequently suggested scoring rubrics are included as well as helpful strategies and observations
