Factory Physics Wallace J. Hopp, Mark L. Spearman, 2011-08-31 Our economy and future way of life depend on how well American manufacturing managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace. A major challenge is how to structure the firm's environment so that it attains the speed and low cost of high volume flow lines while retaining the flexibility and customization potential of a low volume job shop. The book's three parts are organized according to three categories of skills required by managers and engineers: basics, intuition, and synthesis. Part I reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing. Part II presents the core concepts of the book, beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving. Other topics include behavioral tendencies of manufacturing plants, push and pull production systems, the human element in operations management, and the relationship between quality and operations. Chapter conclusions include main points and observations framed as manufacturing laws. In Part III, the lessons of Part I and the laws of Part II are applied to address specific manufacturing management issues in detail. The authors compare and contrast common problems, including shop floor control, long range aggregate planning, workforce planning, and capacity management. A main focus in Part III is to help readers visualize how general concepts in Part II can be applied to specific problems. Written for both engineering and management students, the authors demonstrate the effectiveness of a rule-based and data-driven approach to operations planning and control. They advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems.

Building Lean, Building BIM Rafael Sacks, Samuel Korb, Ronen Barak, 2017-12-06 Building Lean Building BIM is the essential guide for any construction company that wants to implement Lean Construction and Building Information Modelling (BIM) to gain a strategic edge over their competition. The first of its kind, the book outlines the principles of Lean, the functionality of BIM, and the interactions between the two, illustrating them through the story of how Tidhar Construction has implemented Lean Construction and BIM in a concerted effort over four years. Tidhar is a small to medium-sized construction company that pioneered a way of working that gave it a profit margin unheard of in its market. The company's story serves as a case study for explanation of the various facets of Lean Construction and BIM. Each chapter defines a principle of Lean and/or BIM, describes the achievements and failures in Tidhar's implementation based on the experiences of the key people involved, and reviews the relevant background and theory. The implementation at Tidhar has not been a pure success, but by examining their motives alongside their achievements and failures, readers will learn about what pitfalls and pinnacles to expect. A number of chapters also compare the experience of Tidhar with those of other companies who are leaders in their fields, such as Skanska and DPR. This book is highly relevant and useful to a wide range of readers from the construction industry, especially those who are frustrated with the inefficiencies in their companies and construction projects. It is also essential reading for Lean and BIM enthusiasts.

researchers and students from a variety of industries and backgrounds **Designing Service Machines** Ram Babu Roy, Paul Lillrank, Sreekanth V. K., Paulus Torkki, 2018-06-29 This book presents a general conceptual framework to translate principles of system science and engineering to service design Services are co created immaterial heterogeneous and perishable state changes A service system includes the intended benefit to the customer and the structure and processes that accomplish this benefit The primary focus is on the part of the service system that can reproduce such processes called here a Service Machine and methodological guidelines on how to analyze and design them While the benefit and the process are designed based on the domain knowledge of each respective field service production systems have common properties The Service Machine is a metaphor that elicits the fundamental characteristics of service systems that do something efficiently quickly or repeatedly for a defined end A machine is an artifact designed for a purpose has several parts such as inputs energy flows processors connectors and motors assembled as per design specifications In case of service machine the components are various contracts assembled on contractual frames The book discusses Emergency Medical Services EMS and Emergency Departments ED as cases They illustrate that service machines need to be structured to adapt to the constraints of the served market acknowledging the fact that services are co created through the integration of producers and customers resources This book is highly recommended for those who are interested in understanding the fundamental concepts of designing service machines **Process Analysis and Improvement: Text** Marvin S.
