Los,2009-03-03 In many areas nutrient loadings to aquatic ecosystems have increased considerably as a result of population growth industrial development and urbanisation This has resulted in enhanced growth of phytoplankton shifts in composition of the plankton community and changes in the structure of ecosystems which are often considered to be objectionable To help understanding these processes and to predict future conditions a mathematical model BLOOM has been developed and applied since 1977 It simulates the biomass and composition of phytoplankton and macro algae in relation to the amount of nutrients the under water light climate and grazing It can be applied as a relatively simple screening tool but also as part of advanced integrated modelling systems including additional hydrodynamic suspended matter and habitat components The model has been extensively validated which means that its credibility was demonstrated systematically for certain types of applications It has been applied as a supporting management tool to a very large number of aquatic systems worldwide lakes channel systems estuaries lagoons and coastal seas using generic coefficients one set for fresh water one set for marine simulations as much as possible The principles of the model its validation and a number of representative applications are described in Eco Hydrodynamic Modelling of Primary Production in Coastal Waters and Lakes Using BLOOM Mineralogy and Geochemistry of Gems Panagiotis Voudouris,Stefanos Karampelas,Vasilios Melfos,Ian Graham,2020-03-10 Gems have been used in the manufacture of jewellery and as ornaments since antiquity Considering gems recent statistics have shown that about 15 billion Euros are annually at stake Nowadays gemmology i e the study of gem materials is one of the most expanding fields in the earth sciences positioned between academia and industry As an applied science in gemmology the instruments used should be non or microdestructive and their cost should be reasonable both in terms of equipment and time consumption Gemmology can also be used contribute to the development of pure science and in some cases destructive techniques may have to be used Taking into account the fact that gems are albeit rarely available for scientific research this compilation of 20 articles by around 100 researchers from over 30 different institutions situated in 20 countries from around the globe presented in the Special Issue entitled Mineralogy and Geochemistry of Gems offers very good examples on the application of various methods for their study which will hopefully contribute to our better understanding of gem formation in general and will enhance scientific debates attracting more scientists from various disciplines to get involved in this field *Marpa Kagyu, Part One*
