Lesson Objectives

18. Define mutations and describe the different types of mutations.

19. Describe the effects mutations can have on genes.

20. Lesson Summary

Types of Mutations Mutations are heritable changes in genetic information. There are two categories of mutations: gene mutations and chromosomal mutations.

21. Gene mutations produce changes in a single gene. **Point mutations** involve only one or a few nucleotides. Substitutions, insertions, and deletions are all types of point mutations.

- In a substitution, one base is changed to a different base, which may affect only a single amino acid and have no effect at all.
- In insertions and deletions, one base is inserted or removed from the DNA sequence. Insertions and deletions are called **frameshift mutations** because they shift the “reading frame” of the genetic message. Frameshift mutations can change every amino acid that follows the point of mutation and can have dramatic effects on the organism.
