EXCERPT FROM THE BOOK Does this sound like strange advice Not for a muscle diet Your body needs a steady flow of caloric energy to keep on repairing the small rips your muscles develop every time you work out Cutting calories cuts fat but it also keeps you from growing more muscle so get ready to eat a little more than you do right now However your body also needs the right building blocks to repair muscles with and this means including a lot of protein in your diet Take your current body weight and assign one gram of protein for every pound This is a handy guideline for daily protein intake A little less protein 0 8 grams per pound works for lighter workouts while a little more 1 5 grams or more works well if you prefer intense high weight and low repetition workouts most days of the week The moment you start searching online or in your bookstore you ll run into lists of power foods to help hit your protein target while giving you energy Generally good diets include meats fruits vegetables carbohydrate sources and healthy fats This leaves a lot of leeway in specific foods groups so feel free to experiment Buy a copy to keep reading
