**the Arts** Colin Martindale,Paul Locher,Vladimir Petrov,Arnold Berleant,2019-06-04 In this book well known scholars  
describe new and exciting approaches to aesthetics creativity and psychology of the arts approaching these topics from a  
point of view that is biological or related to biology and answering new questions with new methods and theories All known  
societies produce and enjoy arts such as literature music and visual decoration or depiction Judging from prehistoric  
archaeological evidence this arose very early in human development Furthermore Darwin was explicit in attributing aesthetic  
sensitivity to lower animals These considerations lead us to wonder whether the arts might not be evolutionarily based  
Although such an evolutionary basis is not obvious on the face of it the idea has recently elicited considerable attention The  
book begins with a consideration of ten theories on the evolutionary function of specific arts such as music and literature The  
theory of evolution was first drawn up in biology but evolution is not confined to biology genuinely evolutionary theories of  
sociocultural change can be formulated That they need to be formulated is shown in several chapters that discuss regular  
trends in literature and scientific writings Psychologists have recently rediscovered the obvious fact that thought and  
perception occur in the brain so cognitive science moves ever closer to neuroscience Several chapters give overviews of  
neurocognitive and neural network approaches to creativity and aesthetic appreciation The book concludes with two exciting  
describing brain scan research on what happens in the brain during creativity and presenting a close examination of the  
relationship between genetically transmitted mental disorder and creativity      **Tools of American Mathematics**

educational reform technological innovation and spirited entrepreneurship In *Tools of American Mathematics Teaching 1800-2000* Peggy Aldrich Kidwell Amy Ackerberg Hastings and David Lindsay Roberts present the first systematic historical study of the objects used in the American mathematics classroom They discuss broad tools of presentation and pedagogy not only blackboards and textbooks but early twentieth century standardized tests teaching machines and the overhead projector tools for calculation and tools for representation and measurement Engaging and accessible this volume tells the stories of how specific objects such as protractors geometric models slide rules electronic calculators and computers came to be used in classrooms and how some disappeared

Visual Experience Gary Hatfield, Sarah Allred, 2012-06-21 Many of us have been fascinated by visual illusions at some point and have asked ourselves why something can look like one thing when it is fact something else How can we perceive two different things when the light coming into our eyes stays constant This book brings together psychologists and philosophers to explore this aspect of vision
