

When the outcomes in the sample space of an experiment have the same chance of occurring, the outcomes are said to be

_____.

Equally likely outcomes

There is the same chance that the spinner will land on any of the colors.

Not equally likely outcomes

There is a greater chance that the spinner will land on blue than on any other color.

The _____ probability of an event is the ratio of the number of ways the event can occur to the total number of equally likely outcomes.

Theoretical Probability

$$\text{theoretical probability} = \frac{\text{number of ways the event can occur}}{\text{total number of equally likely outcomes}}$$

An experiment in which all outcomes are equally likely is said to be _____. You can usually assume that experiments involving coins and number cubes (dice) are fair.

Finding Theoretical Probability

An experiment consists of rolling a number cube. Find the theoretical probability of each outcome.

(Note the word "experiment" doesn't necessarily mean you are looking for experimental probability.)

A. Rolling a 3.

B. Rolling a number greater than 3.

C. Rolling an even number.

D. Rolling a multiple of 3.

Probability Sums

	$P(\text{heads})$	$P(\text{tails})$	$P(\text{heads}) + P(\text{tails})$
Experimental Probability	$\frac{5}{10}$	$\frac{5}{10}$	$\frac{5}{10} + \frac{5}{10} = \frac{10}{10} = 1$
Theoretical Probability	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2} + \frac{1}{2} = \frac{2}{2} = 1$

The sum of the probability of heads and the probability of tails is 1, or 100%. This is because it is _____ that one of the two outcomes will always occur.

The _____ of an event is all the outcomes in the sample space that

$$P(\text{event}) + P(\text{complement of event}) = 1$$

Theory and Reality Peter Godfrey-Smith,2009-12-11 How does science work Does it tell us what the world is really like What makes it different from other ways of understanding the universe In Theory and Reality Peter Godfrey Smith addresses these questions by taking the reader on a grand tour of one hundred years of debate about science The result is a completely accessible introduction to the main themes of the philosophy of science Intended for

undergraduates and general readers with no prior background in philosophy Theory and Reality covers logical positivism the problems of induction and confirmation Karl Popper s theory of science Thomas Kuhn and scientific revolutions the views of Imre Lakatos Larry Laudan and Paul Feyerabend and challenges to the field from sociology of science feminism and science studies The book then looks in more detail at some specific problems and theories including scientific realism the theory ladenness of observation scientific explanation and Bayesianism Finally Godfrey Smith defends a form of philosophical naturalism as the best way to solve the main problems in the field Throughout the text he points out connections between philosophical debates and wider discussions about science in recent decades such as the infamous science wars Examples and asides engage the beginning student a glossary of terms explains key concepts and suggestions for further reading are included at the end of each chapter However this is a textbook that doesn t feel like a textbook because it captures the historical drama of changes in how science has been conceived over the last one hundred years Like no other text in this field Theory and Reality combines a survey of recent history of the philosophy of science with current key debates in language that any beginning scholar or critical reader can follow
