OBJECTIVES:

At the end of this unit the student will:

1. Describe where eggs come from.
2. Trace the path from hen to table.
3. Identify foods made with eggs.

BACKGROUND:

Eggs are laid by all members of the bird family. The largest eggs are laid by the ostrich, the smallest eggs are laid by the hummingbird. Down through the ages and in many nations today, eggs were obtained by stealing them from various nests until birds were domesticated. The vast majority of eggs consumed in the United States today are produced by the domestic chicken. The female chicken, hen, does not depend upon the presence of a rooster. For the most part today's eggs are not fertile. As long as the eggs are removed from the hen, she will continue to lay more eggs. If the eggs are left in her nest, she may eat the eggs or they may spoil. To produce chicks, a rooster must be introduced. He will mate (contact) with the hen and she will retain sperm for many days. The sperm must fertilize the egg before the shell is formed.

In modern turkey production, all brooding is performed
