Manual For Kaeser Sk 26:

Handbook of Prevention and Alzheimer's Disease C.A. Raji, Yue Leng, J.W. Ashford, Dharma Singh Khalsa, 2024-02-15
It is almost 120 years since Alzheimer's disease AD was first reported and the concept of modifiable risk factors associated with the disease has been present from the outset. Thus the idea of preventing AD is not new with reference to strategies noted as early as the 1990s. This subfield of AD research has matured in recent years with the number of modifiable risk factors the AD preventome rising from the 7 initially identified to the current 12 with an estimated contribution to dementia cases worldwide of about 40%. This book the Handbook of Prevention and Alzheimer's Disease introduces physicians, scientists and other stakeholders to this subfield of AD research. It investigates the AD preventome which will continue to expand as the understanding of new factors and related biomarkers is refined. Optimizing this preventome leads to an improvement in overall brain health an outcome which reduces the risk of developing AD and improves quality of life. The book goes on to examine other domains of prevention from vascular risk factors to social engagement and from sleep health to spirituality. If the journey to end AD can be likened to a long and arduous challenge understanding every possible part of the overall toolkit of approaches for disease prevention and intervention is essential. Together with its companion volume on intervention the book provides a comprehensive overview of strategies for tackling Alzheimer's disease and will be of interest to all those working in the field. With this book Vladimir Golovchinsky presents the first evidence of double crush syndrome as a subgroup of these. To date the existence of double crush syndrome has been a matter of debate. Dr. Golovchinsky presents a statistical analysis of substantial clinical material which finds a cause and effect relationship between cervical or lumbar radiculopathy and peripheral entrapment in corresponding nerves thus proving the existence of double crush syndrome. This book will be invaluable to physicians performing EMG/NCV testing and to other healthcare professionals who encounter peripheral entrapment syndromes in their practices.
