Remote Access Controller

Overview

A Remote Access Controller (RAC) is the device that operates a special access point, such as an elevator, parking entrance or any other door requiring an electric strike or electro-magnetic lock. Magstripe readers (insert or swipe) and contactless readers (for 790) are available.

The controller box is concealed in a utility space behind a wall or ceiling, with a key-locked cover to prevent tampering. The card reader, connected to the controller box, is mounted in a convenient location, such as within a driver's reach at the entrance to a garage or beside an elevator call button. When a user swipes their card in the reader, the controller (programmed with user access information for the entire hotel) grants or denies access according to their privileges. For example, a bank of elevators can be controlled with a RAC in such a way that one or more of the elevators can be reserved for VIP guests and staff only for conventions or special events.

Parking garages can be set up using the RAC so that only users who have paid for parking can enter the garage through pedestrian doors (protected by a lock or exit device operator) and use the garage doors.

The controller maintains an audit trail and provides other features including programmable access times and emergency unlocking of doors when signaled by a fire alarm.

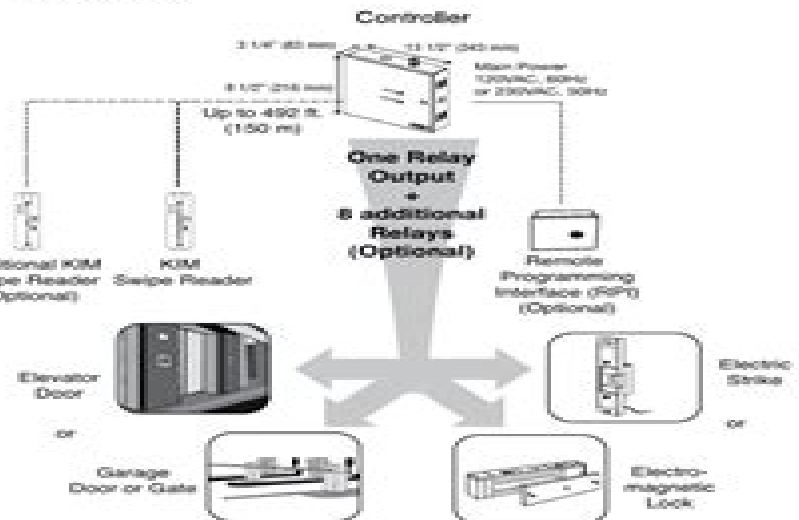

In addition, flexible time zones offer greater customization for controlling access to public areas by staff and guests. The RAC is available in 2 packages the RAC 4 (a low cost, simple solution) and the RAC 4XT (an extendable total access control solution).
