Ranaviruses Matthew J. Gray, V. Gregory Chinchar, 2015-04-27 This is the first book on ranaviruses Ranaviruses are double stranded DNA viruses that cause hemorrhagic disease in amphibians reptiles and fish They have caused mass die offs of ectothermic vertebrates in wild and captive populations around the globe There is evidence that this pathogen is emerging and responsible for population declines in certain locations Considering that amphibians and freshwater turtles are suitable

hosts and the most imperiled vertebrate taxa in the world ranaviruses can have significant impacts on biodiversity and ecosystem function. Additionally, many fish that are raised in aquaculture facilities and traded internationally are suitable hosts; thus, the potential economic impact of ranaviruses is significant. Ranaviruses also serve as a model for replication and gene function of large double stranded DNA viruses. There is an urgent need to assemble the contemporary information on ranaviruses and provide guidance on how to assess their threats in populations. Through the Global Ranavirus Consortium, 24 experts from six countries were organized to write this volume, the first book on ranaviruses. The book begins with a discussion on the global extent of ranaviruses, case histories of infection and disease in ectothermic vertebrates and current phylogeny. Basic principles of ranavirus ecology and evolution are covered next with a focus on host pathogen interactions and how the virus emerges in its environment. There are two chapters that will discuss the molecular biology of ranaviruses, host response to infection and the genes responsible for immune system evasion. One chapter establishes standards for testing for infection and diagnosing ranaviral disease. The book ends by providing guidance on how to design ranavirus surveillance studies and analyze data to determine risk and discussing the role of the Global Ranavirus Consortium in organizing research and outreach activities.

Fish Viruses and Bacteria Patrick T K Woo, Rocco C Cipriano, 2017-04-26. Taking a disease based approach, *Fish Viruses and Bacteria: Pathobiology and Protection* focuses on the pathobiology of and protective strategies against the most common major microbial pathogens of economically important marine and freshwater fish. The book covers well studied notifiable piscine viruses and bacteria, including new and emerging diseases which can become huge threats to local fish populations in new geographical regions if transported there via infected fish or eggs. An invaluable bench book for fish health consultants, veterinarians and all those wanting instant access to information, this book is also a useful textbook for students specializing in fish health and research scientists initiating fish disease research programmes. **Food Safety**

Management Gisela Kopper, Slavko Mirecki, Igor S. Kljujev, Vera B. Raicevic, Blazo T. Lalevic, Jelena Petrovic-Jovicic, Stojmir Stojanovski, Dijana Blazekovic-Dimovska, 2013-11-01. Biological agents, bacteria, viruses and parasites can directly or indirectly contaminate food. Similarly, chemicals such as veterinary drugs used to combat animal illnesses, mycotoxins, particularly aflatoxins, pesticides and environmental contaminants, e.g. dioxins, heavy metals in animal feeds can also be a source of contamination of food. Contamination of agricultural animal and fish products is the result of the presence of human pathogenic bacteria and/or toxic substances which can contaminate products in any part of the production chain. Examples are of the presence of a wide range of pathogens such as *Salmonella* spp, pathogenic *Escherichia coli* and *Shigella*, hepatitis A virus on fresh fruits and vegetables, *E. coli* O157 H7 in meats, *Campylobacter* spp, *Brucella* spp in milk, *Vibrio* sp and ciguatera toxin in fish. Thus, the importance of good practices at the primary production level to prevent diseases and infections in animals, minimize risk of transmission to humans and/or contamination of food as well as to ensure animal health and welfare. The authors address three main primary production systems and the challenges to reduce the safety threats inherent to each.

Good animal farming fish health and good agricultural practices are described extensively so as to provide a clear picture of the complexity of the food production chains and the many factors that need to be under control to ensure the safety of food products
