Groundwater Treatment Technology Evan K. Nyer, 1992-05-15

Groundwater treatment is unique Removing the sources of contamination as we did when we cleaned a river or lake is only the first step A groundwater remediation must include cleaning of the body of water itself the aquifer The revised and updated edition of Groundwater Treatment Technology provides a complete review of the technologies developed over the past 10 years for groundwater treatment It also explains the design techniques that are required to apply those technologies successfully in a groundwater cleanup Featured areas of coverage include Specific design methods for the various technologies that are merely described in other publications Physical chemical and treatability properties of 30 organic compounds that are most often encountered in groundwater situations Detailed strategies for remediation New biological treatment methods Specific data on treatment methods as applied in the field Practical suggestions on applications of technologies for groundwater treatment Drawing on his experience as a designer of over 100 groundwater treatment systems Evan K Nyer starts by showing how to develop the data necessary to define what type of treatment is necessary He then explains how groundwater treatment is unique Nyer follows with expert accounts of specific treatment technologies Physical chemical organic methods such as air stripping carbon adsorption and pure compound removal are explored in detail In addition new techniques including UV Oxidation and other emerging technologies are explained and directly related to groundwater design situations An entire chapter is devoted to biological methods one of the most promising areas for organic groundwater treatment There is also comprehensive coverage of inorganic methods that addresses everything from precipitation to solids liquid separation and advanced ion removal methods This definitive sourcebook also contains helpful cost factor analyses plus representative case histories showing how the techniques of groundwater treatment have been applied in the field Wide ranging authoritative and completely updated the Second Edition of Groundwater Treatment Technology is essential reading for wastewater engineers industrial managers hydrologists soil experts government officials and environmental lawyers who want to keep abreast of the latest developments in this important field **Regolith**

Exploration Geochemistry in Tropical and Subtropical Terrains C.R.M. Butt,H. Zeegers,2015-12-04 The use of exploration geochemistry has increased enormously in the last decade The present volume specifically addresses those geochemical exploration practices appropriate for tropical sub tropical and adjacent areas in environments ranging from rainforest to desert Practical recommendations are made for the optimization of sampling and analytical and interpretational procedures for exploration according to the particular nature of tropically weathered terrains The underlying theme is the recognition that regions between 35 N and 35 S in particular have a common history of deep chemical weathering and lateritization during the late Mesozoic and early Tertiary This has had a profound and lasting effect so that the surface geochemical expressions of mineralization throughout these regions have many similar features with local modification due to more recent weathering under changed climates The volume discusses the data derived from numerous research and case studies in terms of exploration and dispersion models based on the weathering and geomorphological history The models

permit valid comparisons between equivalent terrains that may be geographically widely separated and situated in quite different climatic environments The basis of the volume is to view geochemical dispersion within the context of a genetic understanding of the evolution of landforms and the regolith i e landscape geochemistry and to develop exploration procedures based on this understanding This book should be of interest to exploration geochemists economic geologists soil scientists geomorphologists and environmental geochemists **EPA 440/1** ,1978-04 *Advances in Protein Chemistry* ,1956-01-01 *Advances in Protein Chemistry* Pollution Prevention Kenneth L. Reife, Harold S. Freeman, 1996-01-05 In the last two decades the EPA and other national and international agencies have placed increasingly strict regulations on the manufacture and use of synthetic colorants. The pigment and dye industry has had to develop the technology necessary to analyze and remediate pollutants in wastewater. Although these efforts have produced a considerable volume of information, until now no single book has provided an organized, comprehensive treatment of the environmental chemistry of synthetic colorants. *Environmental Chemistry of Dyes and Pigments* is the first comprehensive reference to address the environmental problems posed by synthetic colorants and to provide a forum for the solutions proposed by industry, government, and academia. Focusing on developments in the field over the past two decades, it deals with all aspects of colored wastewater treatment, the disposal of dyes, analytical methods, toxicity, and regulatory questions. In its coverage of wastewater treatment, this book addresses both the most commonly used methods and those specifically designed to address pollution problems at the source by analyzing for and removing dyes and pollutants from wastewater effluent. Throughout, real world data on a wide variety of dyes and dye intermediates is provided, as well as cost effective strategies for dealing with wastewater treatment. In addition, several chapters are devoted to the perspectives of national and international experts on regulations governing the manufacture, handling, use, and disposal of synthetic dyes and pigments. The impact these regulations have had on both U.S. and foreign industry is also discussed. A complete, comprehensive, and up-to-date guide to pollution prevention in the dyestuff and textile industries. *Environmental Chemistry of Dyes and Pigments* is the only self-contained volume that focuses on the environmental impact of synthetic dyes and pigments. Contributions by international experts from industry, academia, and government make this an indispensable book for anyone dealing with the environmental problems posed by synthetic colorants. It covers the entire range of environmental issues from waste treatment and analysis to pollution prevention and government regulations. Covers the latest wastewater treatment methods. Shows how to use recycling and reusing methods effectively while cutting production costs. Describes state-of-the-art technology, including the PACT[®] system. Explains analysis techniques, including spectrometry and ionization. Covers legislative issues and the regulatory status of various compounds in both the United States and abroad. Examines the various pollution prevention programs instituted by government and industry. Bridging the gap between industrial interests and environmental concerns. *Environmental Chemistry of Dyes and Pigments* stands as an invaluable resource for scientists, researchers, and engineers in the textile and dyestuff industries and in the environmental sciences. It is also an extremely useful text for environmental science students.

Handbook of Semiconductor Manufacturing Technology Yoshio Nishi, Robert Doering, 2000-08-09 The *Handbook of Semiconductor Manufacturing Technology* describes the individual processes and manufacturing control, support, and infrastructure technologies of silicon-based integrated circuit manufacturing, many of which are also applicable for building devices on other semiconductor substrates. Discussing ion implantation, rapid thermal processing, photomask fabrication, chip testing, and plasma etching, the editors explore current and

anticipated equipment devices materials and practices of silicon based manufacturing The book includes a foreword by Jack S Kilby cowinner of the Nobel Prize in Physics 2000 for his part in the invention of the integrated circuit The Industrial Chemist and Chemical Manufacturer ,1927
