Climate Change and the Oceanic Carbon Cycle Isabel Ferrera, 2017-01-12 This title includes a number of Open Access chapters This valuable compendium provides an overview of the variables and consequences of oceanic carbon cycling in the context of climate change The chapters highlight the importance of marine plankton in carbon processing as well as the effects of rising CO₂ and temperature in their functioning Marine ecosystems are being increasingly threatened by growing human pressures including climate change Understanding the consequences that climate change may have is crucial to predict the future of our oceans Rising temperatures and ocean acidification may profoundly alter the mode of matter and energy transformation in marine ecosystems which could have irreversible consequences for our planet on ecological timescales For that reason the scientific community has engaged in the grand challenge of studying the variables and consequences of oceanic carbon cycling in the context of climate change which has emerged as a relevant field of science The book is broken into four sections Understanding the Importance of Ocean Biogeochemistry Quantifying Oceanic Carbon Variables Phytoplankton and Oceanic Carbon Cycle Ocean Acidification Edited by a researcher with many years of experience and with contributions from scientists from around the world this volume explores the most important topics on climate change and oceanic carbon cycling

Chemical Speciation of Organic and Inorganic components of Environmental and Biological Interest in Natural Fluids Francesco Crea, Alberto Pettignano, 2020-03-25 The International Union of Pure and Applied Chemistry IUPAC defines the term speciation as the distribution of an element amongst defined chemical species in a system while the process leading to quantitative estimation of the content of different species is called speciation analysis The chemical speciation of elements in natural waters and biological fluids is a key topic essential for discussing the chemical reactivity of constituents in these systems It is well understood that it is the chemical form of a metal or metalloids that determines its reactivity lifetime and fate in the environment Chemical speciation now involves various sectors of the sciences from chemistry to biology biochemistry and environmental sciences since as is well known the total concentration alone of an inorganic or organic component metal or ligand in a multicomponent natural system fresh water sea water biological fluids soil etc is insufficient for a comprehensive understand of its behavior in those contexts
