Cugliandolo,2014-06-12 This book gathers the lecture notes of courses given at the 2011 summer school in theoretical physics in Les Houches France Session XCVI What is a quantum machine Can we say that lasers and transistors are quantum machines After all physicists advertise these devices as the two main spin offs

of the understanding of quantum mechanical phenomena However while quantum mechanics must be used to predict the wavelength of a laser and the operation voltage of a transistor it does not intervene at the level of the signals processed by these systems Signals involve macroscopic collective variables like voltages and currents in a circuit or the amplitude of the oscillating electric field in an electromagnetic cavity resonator In a true quantum machine the signal collective variables which both inform the outside on the state of the machine and receive controlling instructions must themselves be treated as quantum operators just as the position of the electron in a hydrogen atom Quantum superconducting circuits quantum dots and quantum nanomechanical resonators satisfy the definition of quantum machines These mesoscopic systems exhibit a few collective dynamical variables whose fluctuations are well in the quantum regime and whose measurement is essentially limited in precision by the Heisenberg uncertainty principle Other engineered quantum systems based on natural rather than artificial degrees of freedom can also qualify as quantum machines trapped ions single Rydberg atoms in superconducting cavities and lattices of ultracold atoms This book provides the basic knowledge needed to understand and investigate the physics of these novel systems

Microwave and Millimetre-Wave Design for Wireless Communications Ian Robertson, Nutapong Somjit, Mitchai Chongcheawchamnan, 2016-06-20 This book describes a full range of contemporary techniques for the design of transmitters and receivers for communications systems operating in the range from 1 through to 300 GHz In this frequency range there is a wide range of technologies that need to be employed with silicon ICs at the core but compared with other electronics systems a much greater use of more specialist devices and components for high performance for example high Q factor low loss and good power efficiency Many text books do of course cover these topics but what makes this book timely is the rapid adoption of millimetre waves frequencies from 30 to 300 GHz for a wide range of consumer applications such as wireless high definition TV 5G Gigabit mobile internet systems and automotive radars It has taken many years to develop low cost technologies for suitable transmitters and receivers so previously these frequencies have been employed only in expensive military and space applications The book will cover these modern technologies with the follow topics covered transmitters and receivers lumped element filters transmission lines and S parameters RF MEMS RFICs and MMICs and many others In addition the book includes extensive line diagrams to illustrate circuit diagrams and block diagrams of systems including diagrams and photographs showing how circuits are implemented practically Furthermore case studies are also included to explain the salient features of a range of important wireless communications systems The book is accompanied with suitable design examples and exercises based on the Advanced Design System the industry leading CAD tool for wireless design More importantly the authors have been working with Keysight Technologies on a learning teaching initiative which is designed to promote access to industry standard EDA tools such as ADS Through its University Educational Support Program Keysight offers students the opportunity to request a student license backed up with extensive classroom materials and support resources This culminates with students having the chance to demonstrate their

RF MW design and measurement expertise through the Keysight RF Microwave Industry Ready Student Certification Program www.keysight.com find eesof university www.keysight.com find eesof student certification **Innovations in Electronics and Communication Engineering** H. S. Saini, R. K. Singh, K. Satish Reddy, 2017-11-08 The book contains high quality papers presented in the Fifth International Conference on Innovations in Electronics and Communication Engineering ICIECE 2016 held at Guru Nanak Institutions Hyderabad India during 8 and 9 July 2016 The objective is to provide the latest developments in the field of electronics and communication engineering specially the areas like Image Processing Wireless Communications Radar Signal Processing Embedded Systems and VLSI Design The book aims to provide an opportunity for researchers scientists technocrats academicians and engineers to exchange their innovative ideas and research findings in the field of Electronics and Communication Engineering
