Q.1: Define and explain the electric charge.**Ans: Electric Charge:**

Charge is a basic characteristic of matter that causes electrical processes. Charged particles are found in most materials. Protons and electrons have opposing unit charges. Neutral atoms have the same number of electrons and protons.

Electric charge is a fundamental feature of matter that is carried by some elementary particles and governs how the particles react to an electric or magnetic field. The charge is a scalar quantity with the coulomb as its S.I unit.

**Q.2: How electric charge can be produced?****Ans: Production of Electric Charge:**

When we comb our hair with a plastic comb and then bring it close to small pieces of paper, the comb will attract the paper pieces to itself. In the same way, rubbing amber with silk causes it attract small pieces of paper. The electric charges that are imparted to things through the process of rubbing is the cause of the properties of attraction and repulsion that are exhibited by different types of matter. A static electric charge can be generated by rubbing together two neutral bodies.
