

# History Research Papers

WRITING SERVICES - UNCW - DEPAOLO HALL, 1ST FLOOR - 962-7857

To write a good research paper, you must ask a good historical question.

**History** is the study of **change over time**. When somebody writes a history paper or book, she is **offering an interpretation** of how and why something changed over time.

So a historical question is one that asks how to interpret change over time.

Not every question about the past is a historical question. Historical questions address **change** and how to **interpret that change**. They must have boundaries of **time, place, and people**.

Bad: How did African-Americans react to World War Two?

Better: How did Southern African-Americans react to the draft in World War Two?

Best: How and why did lower class African-Americans from North and South Carolina respond to the draft from 1941-1945?

This last question focuses research on a **specific group** of people in a **specific place** during a **specific time**. Because there is a response over a period of time, it allows several answers, including how their response could have changed over the time period.

A good question is also one that is **significant**. You should be able to say why it is important to answer this question.

Your interpretation must be supported by the **primary sources**. You need **evidence** to support your interpretation. Different interpretations are possible, so why should the reader believe yours over someone else's?

To come up with a question, pick a narrow topic.

The easiest way to pick a topic – picking something general or really famous (e.g.: Civil War, Nazis, WWII) – will leave you with too broad of a topic. You need direction and focus; otherwise, you will have too much information or will get bored with what you already know. It is not that there is nothing new to learn about those kinds of topics, but if you cannot say exactly what new thing you want to learn about it, you are probably not as interested in it as you think you are. You must have an interest in an aspect of the topic or a desire to explore it from a different angle (e.g. the draft in WWII).

Try picking something that really interests you. Pick something you have questions about. Pick something you are willing to read a lot about.

Do not pick something that you have already made up your mind about, unless you are willing to change your mind based on the evidence.

**History of Computing: Learning from the Past** Arthur Tatnall, 2010-08-06 History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn't history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010
