

Executive summary

Project objective

The main objective of the EQUUS project, as set out in the call for tenders, is to collect existing national and international information on quality standards and benchmarks in drug demand reduction, to set up an inventory of these standards and benchmarks, and to extract from the inventory lists of minimum quality standards to be submitted to a range of relevant stakeholders for approval. The result is intended to facilitate a quality awareness and improvement process throughout the EU Member States.

The various elements of the project are summarised as follows:

- a. To describe the background and the tasks of the project
- b. To describe the methods used for developing the inventories
- c. To describe the consensus building process for the final results of the project
- d. To outline problems and perspectives for the implementation of the proposed minimum quality standards at European level
- e. A summary of project results

Background

All approaches to drug demand reduction have expanded and diversified considerably during the last two decades. New intervention types are developed and evaluated, new settings are included in the treatment and prevention networks, special target populations have gained more attention. A main focus was and is on capacity building in order to reach out to those in need of interventions and to increase coverage of prevention, treatment and harm reduction services. However, services must be of good quality in order to be effective. The quest for quality standards is essential. Using available knowledge from research evidence on «what works», overriding discriminatory and negative attitudes towards people with substance abuse problems, respecting human rights and medical ethics are all part of quality. But while research evidence on efficacy and effectiveness of interventions is growing and can be accessed through reviews and guidelines, a consensus on quality standards still needs to build up.
