

Phillips Exeter Academy - Mathematics 4C – page 68 – problem 2

The diagram shows the *slope field* for the differential equation $\frac{dy}{dx} = 0.8 \cdot y \cdot (1 - y)$, which assigns a slope to each point in the xy -plane. For example, verify that the slope assigned to $(1.3, 1.5)$ is -0.6 . In the diagram, a few of these slopes are represented by short segments. A slope field allows you to visualize the behavior of the solutions to a differential equation. In particular:

- (a) The diagram suggests that the equation has some constant solutions; what are they?
- (b) Verify that $y = \frac{2}{2 - e^{-0.8x}}$ is a solution to the differential equation. Use the slope field to help you sketch this curve.
- (c) If $y(x)$ is a solution to the differential equation, and if $y(0)$ is positive, what is the limiting value of $y(x)$ as x approaches infinity?
