[Social Hormones and Human Behavior: What Do We Know and Where Do We Go from Here](#) Idan Shalev, Richard Paul Ebstein, 2015-02-11 Oxytocin (OT) and arginine vasopressin (AVP) are the paramount social hormones in mammals, and accumulating evidence also strengthens the unique role of these neuropeptides also in human social behavior. Indeed, from voles to humans, OT and AVP modulate an intriguing number of social behaviors resonating across species, such as the quality of pair bonding, parenting, modulations of social stress in group and out-group relationships, and social communications. Recent molecular genetic studies of the oxytocin receptor (OXTR), arginine vasopressin receptor 1a (AVPR1a), and arginine

vasopressin 1b AVPR1b receptors have strengthened the role of these two neuropeptides in a range of normal and pathological human behaviors. Importantly, dysfunctions in the OT and AVP neural pathways are likely contributing to deficits in social skills and communication in disorders such as autism. This Research Topic covers the state of the science and provides a deep view of social hormone research in humans to illustrate how pharmacological, genetic, and neuroimaging strategies can be successfully combined toward unraveling the mystery of how human social behavior is regulated. Understanding human social behavior at the molecular level, i.e., social neuroscience, is not only crucial for treatment and diagnosis of disorders characterized by deficits in social cognition but also has important implications in establishing the congruence of findings from different approaches in the Social Sciences and Biology. We bring together in this issue a broad spectrum of investigators from the neurosciences, genetics, psychology, economics, and political science towards a deeper understanding of the biological roots of human social behavior. We hope that this transdisciplinary Research Topic will bring new insights and ideas to the field, give future perspectives while also addressing open questions and limitations in order to develop intervention and prevention strategies and to translate the basic social hormone research into clinical applications.
